

OIL AND GAS

New Hope For Nyagan

TYUMEN'. Recent discoveries by geologists will help to extend the life of the operating industries of Nyagan'. Yesterday oil flowed from a borehole that was being tested by a team headed by A. Apel'gants. The value of the discovery lies in the fact that the productive stratum is situated at the depth of only one and one half kilometres.

Soil Construction Qualities Improved

The application of science has helped to solve a difficult technical problem in the "Medvezh'e" gas field.

The National Gas Scientific Research Institute has found a way to improve the construction qualities of soils. A special chemical solution has been used to make them more stable, more frost-resistant and water-resistant.
