

ANNUAL MEETING OF ORPHANS HOME

WORK OF THE YEAR WAS REPORTED UPON

Gratifying Financial Statement Was Presented—Managers Elected to Look After the Institution.

The annual meeting of the friends of the Protestant Orphans Home was held at the city hall on Friday, Chas. Hayward presided.

The president's report was presented and received. This report, which was the 33rd annual statement, congratulated the society upon the continued prosperity of the institution.

"It is difficult to fairly estimate what has been achieved," says the report. "It should be considered in two aspects, and not only into account the number of children maintained, educated and by early example and association forming in them habits of life and character that will enable them to become useful citizens and an influence for good, but also to ponder upon what the result would have been if these little ones had remained neglected and uncared for, growing up exposed to teachings and examples dangerous both to their moral and physical well-being and almost certain to become in other ways a burden to the community besides being active agents in disseminating evil."

"It has been well said that a pure home, clothing and education are the rightful inheritance of childhood, and it is a sacred obligation upon society to see that these rights are protected."

"We are greatly encouraged by the firm conviction that our home has been successful in discharging its share of this obligation and in seeing that as far as the rights of children are safeguarded and protected."

The work of the ladies' committee is praised in high terms. Special praise was bestowed upon Mrs. W. Wilson for her efforts in collecting for the funds of the institution.

The treasurer, E. Crow Baker, and the auditor, A. B. Fraser, sr., are given credit for their work.

Mrs. McTavish, for the ladies' committee, also reported on the work of the year, and gave great credit to the matron, Mrs. Kay. The wooden wash-tubs have been replaced by more sanitary earthenware ones. The floor of the hall has also been covered with linoleum.

The report says: "A more than generous response was received in answer to the circular letters. The contributions from the outlying districts for fruit and vegetables, principally potatoes, the latter, as we all know, with good bread and butter, holding an important position on the menu of the institutions. Here it may be of some interest to know that it requires on an average a sack of flour a day for bread, ten pounds of porridge constitute part of the morning meal, and a sack of potatoes being sufficient for three days' consumption."

"The deep thanks of this institution were given to the kind donors, and we again repeat our gratitude. The cow purchased from Mr. Bishop has proved to be a veritable dairy, not only supplying all the milk, but almost affording sufficient butter to be made for the use of the home. Whilst this institution has fortunately a large stock of poultry, which keeps the home well supplied with eggs, it may be stated that the matron was enabled to preserve 70 dozen eggs for winter use."

"The annual pound party was, we think, a greater success than ever, not so much in the number of those present, but in the quantity of pounds donated. This replenished the treasury, and thereby relieving the treasury, and in this way contributing in no small degree to the support and maintenance of the orphanage."

"Although during the past year there has been a great deal of sickness in the home, we are thankful to say that under the careful medical attention of Dr. Carter, always gratuitously and cheerfully given, and the good nursing received, all passed safely through the trying ordeal."

"The 9th day of August last will long be remembered by the children as a red-letter day in their lives. Their kind hostess, Mrs. Newton, of Oak Bay, provided special cars to convey them to and from that favorite resort, there to enjoy their hearts' content of hot, happy days on the beach."

"It was with reluctance and regret that the resignation of Mrs. McCulloch as president of this committee, which she had served with the greatest satisfaction for several years, was accepted. By request Mrs. G. A. McTavish kindly relieved her of her duties for the remainder of the year, she, however, still continuing to be one of the committee."

"Mrs. Hutcheson and Mrs. W. W. Wilson, two valuable members of this committee, have been greatly missed at the past meetings, but having been compelled to take a forced rest through serious illness, but we trust and hope they will be able to occupy their customary places in the new year."

"It is with feelings of sorrow and respect that we mention the death of Mrs. Cridge, who for many years was president of this institution, and who had watched it grow with keen interest."

CHILDREN'S GIFT TO HOSPITAL

GIVEN AT DIRECTORS' MEETING LAST NIGHT

Board Will Be Responsible For Extra Expense in Building of Children's Ward.

One of the pleasing features of the regular monthly meeting of the directors of the Jubilee hospital on Friday was the receipt of \$76.70 from children whose parents are members of the three local lodges of the Ancient Order of Foresters. The money was turned over by W. J. Bolden, who explained that it was to go towards a children's ward in the hospital. It was raised as a result of the children's efforts at a recent entertainment in the A. O. U. W. hall.

In the course of routine report of the resident health officer was submitted. This showed that for the month of February the total number of patients treated were 163, total number admitted, 97, total number of free patients treated 76, total days' stay, 1,871, total daily average, 66.23. Dr. Hasell also reported the following donations received: From George Meldrum, a year's subscription to the Victoria Star and Herald; H. J. Downey, a box of apples; Mrs. Hardaker, three sugar basins, three cream jugs and three feeding cups.

A letter from the clerk of the city council acknowledging the board's communication regarding a sewer through the hospital grounds and the acceptance of the proposal therein, was also received and a vote of thanks to the corporation was passed.

A report from Dr. Hasell was read on the recent fire in the south dormer of the hospital, and a vote of thanks for the assistance they rendered.

The building committee reported as follows: "Your building committee beg to report that they met a committee of the Women's Auxiliary on the 14th inst. and that Mr. Hooper, the architect, was present. The plans and specifications of the proposed children's ward were further discussed and Mr. Hooper stated that with some alterations the ward can be constructed, exclusive of heating arrangements, within the sum now in hand. We therefore, wish to know whether or not you are prepared to assume the cost of heating the proposed ward."

The report was received and adopted, and it was recommended that the board should take upon itself the responsibility for any extra expenditure that might be incurred, over and above the \$5,000 raised by the ladies for a children's ward.

The house committee's report for February was next read as follows: "Your house committee begs to report that they have continued their regular meetings at the hospital during the past month."

"We have arranged with Miss Gertrude Richards to fill the vacancy of head nurse at the rate of \$40 per month, which will commence her duties on 1st prox."

"There were 57 saloon passengers for Victoria, as follows: Mrs. Rumball, R. Seutchings, C. Tycho, J. Harriman, Mr. and Mrs. Drake and child, Mikado, S. Tsukamoto, D. Hamada, G. Zutani, K. Kaspiwai, M. Tammiota, T. Zamanota, K. Kurota, T. Saka, M. Waki, K. O. Kama, S. Kasashima, C. Rigone, D. Zamanota, S. Kerita, S. Gastaki, T. Ishihara, A. Nakashima, T. Fujita, K. Kawada, Mr. Shinagawa, Mrs. Shinagawa, Z. Nakata, J. Wahimoto, S. Nononaja, K. Kagoara, R. Matsuda, S. Yamamoto, R. Shimozu, Z. Shigemura, K. Kawasoto, P. Tamaki, T. Zamaguelki, T. Kitamura, K. Neta, K. Morigakalehi, S. Kagawa, G. Matsumoto, H. Kanda, D. Nakashima, K. Inura, T. Notoke, T. Hirota, T. Sato, H. S. Wara, Mrs. W. Griffiths, Mrs. G. Kakakira, Mrs. Pahey, Mrs. I. Schafer and three children, R. Kaus and J. Baker.

"Among the passengers who will get off at Vancouver is Rev. M. Hemmi, a Roman Catholic clergyman, who has spent twelve years in Australia, and is now on a trip back to the Emerald Isle. The reverend gentleman was glad to see the same rate of passage on this day, but said he would much rather be landed in Ireland."

Lieut.-Col. Kirkpatrick, of the British army, was a passenger en route for England. He has been in Japan during the late war in the interests of the home government.

"The report of the finance committee was as follows: "Your finance committee beg to report that they met at the board of trade office at 4.30 p. m., on Thursday, March 15th, 1906."

"According to the minutes of the February meeting, \$2,559.61 were examined and approved for payment."

"The salaries for the same month amounting to \$1,925.20 were paid on due date."

A discussion on the financial question followed, after which Mr. Bolden presented the above mentioned donation of \$76.20, and asked if there was a balance that the children have the privilege of saying how it should be expended. The gift was acknowledged with great gratitude.

A resolution was unanimously passed instructing the finance committee to be present at each regular monthly meeting of the board, and to have prepared a statement of the finances in detail for each month.

A special committee composed of President Forman and Mr. Bolden was appointed to investigate and report at the next meeting, the cost of purchasing and installing a steam laundry plant, or the necessity of having Mr. Forman give an outline of the probable cost of the machinery at about \$1,750.

After some further discussion on hospital matters in general the meeting adjourned.

—Far West Lodge, No. 1, K. of P., will to-night confer the amplified rank of two degrees, and a large attendance is requested.

NEW ATTORNEY-GENERAL

Hon. F. J. Fulton Has Sworn In His New Office.

There Was No Small Pox in British Columbia Last Year—General Measurements.

The annual report for 1905 of Dr. Fagan, provincial health officer, contains the gratifying information that no smallpox existed in the province in the year.

"The principle followed," he says in his report, "is to treat suspects as actual cases till diagnosis is absolute. I submit that the money expended by such action is not wasted, for one neglected case, outside the danger to life, might cost the province thousands of dollars."

"Diphtheria and scarlet fever are diseases we may expect to have always and one of negligence in reporting from our officials are active, painstaking and careful, and while this spirit remains many lives will be saved, which with the want of these qualities would be beyond doubt be lost."

"I regret to have to report great negligence on the part of private practitioners and heads of households in reporting cases of these diseases. It is virtually through this neglect that epidemics are caused, and deaths following should appeal to practitioners and heads of families in such a way as to compel them to recognize their responsibility in the premises. I have before me reports of negligence in reporting from two municipalities. In each place a great deal of suffering and disease and even deaths resulted. It is my plain duty to see that there shall be no such repetition."

"On my recent visit to a house in which rumor said there was scarlet fever, I found a mother and child very ill, with the disease well marked. I asked the physician in charge why he had not reported. His reply was that he had only seen the case once, and so early in the development of the disease that he was uncertain as to diagnosis. In this case the results might have been very serious, for the place was a sort of auxiliary dairy. They sold milk to regular milkmen."

"When I reported this case to the executive I was instructed to proceed legally against the medical attendant. In his report that he was uncertain as to what was the trouble made it difficult to bring home to him any charge of negligence, and in the circumstances it was thought desirable to suspend him from his duties. As a result I have recommended that the Health Act be changed, and if this is done physicians and householders, who not only know, but who suspect, or have reason to suspect, the presence of infectious disease, must report. I beg to recommend that, when this amendment passes, the law be rigorously enforced. If this is done it will be interesting to compare the number of deaths occurring in the province this year and next."

"The reported cases throughout the province during the year were: Diphtheria—146; deaths, 8. Scarlet fever—188; deaths, 5."

"In the treatment of diphtheria a death rate of 6.1 per cent. is an excellent showing, and is most creditable to our physicians. It is quite evident that anti-toxin has been freely used, for otherwise such a result would be impossible."

"The principle of the serum treatment of this disease is now universally acknowledged as being the best, and which, if used in the proper and repeated doses to be given at the earliest possible moment. Unfortunately this remedy is very unstable, and unless kept under proper conditions it quickly becomes inert. This is why the result has raised the price to such a point that I am satisfied it is not used as it should be. In my opinion this article should be lifted from the field of commercialism, because, being such a life-saving item, it should be available to all at the cost of production."

"Under instructions, this board has made provision to keep a small supply of anti-toxin in three places. The price is placed at five per cent. over the cost of purchase. This is merely tentative, and if it is found to work well, will be extended. But in my opinion the Diphtheria Serum should take up the important matter and from a central laboratory, manufacture, and supply all sera at present known to science."

"Typhoid fever has been much in evidence during the year. This disease, which those above named, is exceedingly reported, and it has become epidemic in many places because the source of the trouble was not inquired into. Measles, mumps and whooping cough were very prevalent during the past year."

"It is proposed to insist on reporting these diseases, and parents as well as physicians will be made to observe the law."

"An inspection by a competent and energetic officer was maintained during the fishing season at the canneries. He did his work well, and had a number of the cannery managers fined in the police court for infringement of the law. I think it will be conceded that it is a difficult matter for one patrolman to see that the regulations are carried out when it is considered that there are about forty canneries operating on the Fraser river and Gulf from New Westminster to English Bay. Again, when it is remembered that over two thousand fishermen are scattered over a very large area, and sometimes are overloaded with fish which they find impossible to sell, it can be well understood that one man, however brave, would not be able to prevent the throwing into the river of rejected fish. I do not know whether the Dominion authorities are supposed to give any assistance in this connection, but so far as the fishermen are concerned, no action to prevent the pollution of our foreshores or river, or to assist in any way in carrying out regulations, which no doubt authorities, having full control of fishery matters, have enacted. I have many times seen fishermen

THE HEALTH OF THIS PROVINCE

THE ANNUAL REPORT MADE BY DR. FAGAN
