

Honest Capacity Cream Separators

Capacity is an important consideration in the purchase of a cream separator. It enters largely into the cost and value of the machine, and there is no way of properly gauging either without reference to it.

A large capacity machine separates the same amount of milk in just so much less time. This saving of time means something in dollars and cents every time the machine is used. It means a great deal in the course of a month or a year. Moreover the wear of the machine is just so much less and it lasts that much longer.

But capacity must always be determined with CLEAN SKIMMING under the PRACTICAL, EVERY-DAY USE CONDITIONS,—with ordinary separator speed, cows old as well as fresh in lactation, milk cool as well as warm, and thick as well as thin cream. Capacity means nothing if any of these conditions have to be sacrificed to obtain it.

Hence capacity marks one of the BIG DIFFERENCES between the "ALPHA-DISC" DE LAVAL and other cream separators. The DE LAVAL machines fully meet these conditions. All other machines either lack the capacity "claimed" for them or can only reach it through sacrifice of one or other of the important practical use considerations named.

A DE LAVAL catalogue makes plain the reasons for this difference and is to be had for the asking.
