

# CONTENTS.

	Page.
INTRODUCTORY.....	6
PART I.—GENERAL PRINCIPLES OF THE COMBUSTION OF COAL, AND THE GENERATION AND USES OF STEAM.....	7
On the heat energy of coal.....	7
Table showing the chemical composition and heating value of bituminous, anthracite and lignite coals.....	7
Combustion.....	7
Prevention of excess air.....	8
Fuel bed and air supply.....	9
Complete combustion.....	9
Combustion and grate area.....	9
Heat transmission.....	10
Radiation.....	10
Convection.....	10
Heating surface.....	10
Economizers.....	11
Air preheaters.....	11
Feed water purifiers.....	11
Steam auxiliaries.....	11
Steam jets.....	11
Heat loss from steam pipes.....	12
Boiler blow off valve.....	12
Steam for drying.....	12
Steam for heating buildings.....	12
Exhaust steam heating.....	13
Measurements and control.....	13
Summary of losses and precautions to be taken.....	14
i. Excess air.....	14
ii. Incomplete combustion of gases.....	14
iii. " " solid combustibles.....	14
iv. Hot flue gases.....	15
v. Radiation losses.....	15
vi. Heat transmission.....	15
vii. Exhaust steam.....	15
viii. Heating buildings.....	15
ix. Drying products.....	15
x. Measurements.....	15
PART II.—ADVICE TO HOUSEHOLDERS ON DOMESTIC HEATING.....	16
Temperature.....	16
Humidity in the house.....	16
Air leakage into the house.....	16
Regulating the furnace.....	16
Burning the coal.....	17
Sifting ashes.....	18
Chemicals alleged to improve combustion: warnings against.....	18
Air leakage into the furnace.....	18
Soot removal.....	18
Covering the furnace and water pipes.....	19
Summary of suggested methods for saving fuel.....	19
PART III.—ON THE SAFE STORAGE OF COAL.....	20
Danger of spontaneous combustion.....	20
Practical methods of prevention.....	20
Reference to books treating on coal storage, and explaining the dangers, cause, etc., of spontaneous combustion—published by the Mines Branch of the Department of Mines, Ottawa.....	21
