

obtained in the work and the "Table showing the Rock-Formations of the district" by Mr. H. M. Ami\* in their natural order has been thoroughly confirmed by the drillings obtained at the works. Many of these were examined by Mr. Ami and their evidence was quite conclusive.

Special examinations were made of the Post-Tertiary formations at Poupore's Quarry, Hull, and a valuable series of photographs taken by Messrs. H. N. Topley, Mr. McConnell and Mr. Low, in company with Mr. Ami. These illustrate very well the mode of occurrence and distribution of these deposits at the locality in question.

Whilst the excursions afford information to a larger number of members of the Club—it is manifest that only when work is of a more individual, close and systematic nature does it result in being of a more useful kind. Small working parties are found to be of incalculable value in obtaining reliable information and carrying on original work in any district.

In conclusion, your leaders hope that the interest manifest in Geological work by the members of our Club may continue, and the whole is respectfully submitted.

H. M. AMI,

A. P. Low,

*Leaders.*

### EXCURSION No. 3.

Members will please take notice that the next General Excursion of the Club will be held on Saturday the 19th July. The place chosen is Montebello, a thriving village, charmingly situated on the North bank of the Ottawa River, about 40 miles from the city. It is noted for its surrounding forests, mountains and numerous cold water brooks and springs, and near it is the fine mansion of the Papineau family. The Steamer *Empress* will leave the Queen's Wharf at 7:30 A. M. and return at about 7 P. M. The following rates will be charged: Adults, 50c.; Children over 6 and under 12 years, 25c. The locality is rich in minerals and of much general interest to geologists, while the fauna and flora are abundant and of an exceedingly varied character.
