## Legislation and the Competitiveness of Canadian Supply Chains

Joseph D. ...  
The Hon. ...

In 2009, Canada's supply chain is facing a number of challenges. The global financial crisis has led to a sharp decline in demand for goods and services, and this has had a significant impact on the supply chain. In addition, the global financial crisis has led to a sharp decline in the value of the Canadian dollar, which has made it more difficult for Canadian companies to compete in the global market. The Canadian government has taken a number of steps to address these challenges, including providing financial support to companies and implementing measures to improve the efficiency of the supply chain. This paper will discuss the impact of these measures and the challenges that remain.

The Canadian government has taken a number of steps to address the challenges facing the supply chain. In 2009, the government announced a \$10 billion package of measures to support the supply chain. This package included a number of measures to improve the efficiency of the supply chain, such as providing financial support to companies and implementing measures to improve the efficiency of the supply chain. The government has also implemented a number of measures to improve the efficiency of the supply chain, such as providing financial support to companies and implementing measures to improve the efficiency of the supply chain. These measures have helped to improve the efficiency of the supply chain and have helped to support the growth of the Canadian economy.
