

HOUSEHOLD HANDICRAFTS—These include simple carpentry, glazing, white-washing, painting and papering.

The object of this course is to make it possible for girls to do ordinary repairing, to keep their homes clean and attractive, and to develop what a New Englander would define as "gumption."

All girls are given a three years' course in Agriculture which includes nature-study, gardening, dairying and animal industry. Hampton feels that the importance of agriculture for girls as well as for boys cannot be too strongly emphasized. A large part of the care of the dairy, the breeding of poultry, the raising of vegetables and small fruits and the making of gardens should be the work of the women.

TRADE COURSES.

The Trade School offers courses in Carpentry, Cabinet making, Harness making, Painting, Wheelwrighting, Blacksmithing, Machine work, Tailoring, Bricklaying, Shoemaking, Steam Engineering, Tinsmithing.

The advantage of entering the Trade School is that one can take up a trade by logical and systematic steps from beginning to end. Each department is free to teach fundamental principles, by the careful application of which to commercial work, and by constant drill in the use of tools, it is believed the student has a far better chance of well-rounded training than under the apprenticeship system.

In addition to the above there is large opportunity for experience in the various productive industries on the school grounds. These industries are directly under the control of the Institute and are open to the Trade School students, who are expected, as a part of their respective courses, to spend in them a portion of their time. The Trade
