

AERO BRAND CYANIDE

is made by simply fusing

CYANAMID + COMMON SALT

in an electric furnace

Cyanamid (air-nitrogen) is produced at Niagara Falls, by the American Cyanamid Company, at the rate of 72,000 tons per annum. It is the cheapest source of fixed nitrogen.

Common salt is abundant and relatively cheap.

The process of converting these two raw materials into Aero Brand Cyanide has been in regular operation since January, 1917.

Regular and dependable supplies of "Aero Brand" are assured to buyers at a price per pound of contained cyanide which is actually less than the pre-war price of sodium cyanide.

Thousands of tons of Aero Brand Cyanide have been used in Mexico, Canada and the United States. Booklet C, telling about the interesting results obtained with this unique, money-saving product, will be sent on request.
