

THE COURIER. FRIDAY, OCTOBER 11, 1890.

THE INDUSTRIAL EXHIBITION. FIRST DAY. Heavy clouds with small but constant rain in the early part of yesterday morning seemed to promise anything but a favorable day for the Exhibition; it cleared up, however, at about 12 o'clock, so far as the rain was concerned, though the atmosphere continued dark and gloomy throughout the whole day.

At a little after two o'clock we went down to the Bonsecours Market, in the two great Halls of which the articles sent to the Exhibition were arranged for public inspection. The doors had been opened to the public generally at two o'clock, and when we arrived, the Hall on the left hand side the Rotunda, as you enter that part of the building, was already very crowded.

At the end of the Rotunda, against the wall, were placed some specimens of pairs of steam-engines from one of the city foundries, amongst which we particularly noticed the brightly polished head of a cylinder of large size, and an iron screw several feet long, and of about two inches diameter, which we think could not be surpassed; in fact, we saw not the slightest discernible flaw in it from one end to the other.
