

The Toronto Mineral Wool Mfg. Co. have been incorporated with a capital stock of \$24,000 to manufacture mineral wool.

The Bennet & Wright Co., Toronto, have been incorporated with a capital stock of \$98,000 to manufacture boilers, furnaces, etc.

A despatch from Quebec states that the arrangements between the Montmorency, Que., Cotton Company, whose mills are at Montmorency Falls, and the Canadian Cotton Combine, expire on the 31st of August. No new arrangements have been made and the probabilities are that the Montmorency Company will run its mill independent of the combine. The Montmorency Company have issued a circular to the trade that they will be prepared to furnish goods on their own account on and after September 1st. No mention is made of prices and the members of the combine do not think that the Montmorency people will try to undersell them at present. Their output consists of gray cotton.

A description of the works of the Ottawa Carbon and Porcelain Company may be opportune in view of the fact that they will shortly be completed. From the Elgin, Isabella, Metcalfe, or Jane street elevations, the erections with the high kilns and chimney stacks, present a decidedly manufacturing appearance to the district. The main frontage runs 300 feet parallel to the southern side of the C. A. R. depot, the rails only being separate from the works by the width of Isabella street. This elevation shows a row of brick two-storey buildings, to be used as storage of the new material, such as clay, coke, etc. A continuation of this frontage is the offices of the company, divided by the main cart entrance. At the rear of these buildings there is a space between them and the main works proper. Over this space a siding of the Canada Atlantic will be run for the purpose of conveying coal, coke, fireclay, and other materials, the coal being dumped to the boiler-room by a unique arrangement. The works proper are divided into two sections, the porcelain and the carbon manufactories. To the west end of the central building, which will be two storeys high, and be occupied by the machinery and dynamos, will be the carbon department, whilst to the eastern side will be the porcelain. Both of these departments extend the entire length of the works to the rear, going through their different processes till they reach the immense store room at the back. About a hundred and fifty men will be employed immediately everything is ship-shape, and gradually that number will be increased very considerably.—Ottawa Free Press.

The Easton Boot & Shoe Mfg. Co., Toronto, have been incorporated with a capital stock of \$3,000 to manufacture boots and shoes.

E. E. Collins' agricultural implement works and Wm. Collins' cabinet works, at Simcoe, Ont., were destroyed by fire May 24; loss about \$1,500.

The British Columbia oil and guano factory enterprise, mentioned in the Colonist some time ago, is progressing very favorably. The factory is being erected on the Fraser river, and will be open for business very shortly. I. Watts, the manager, says that the company will be able to handle the business so as to for all time solve the problem of the disposition of offal.—Victoria, B.C., Colonist.

John Starr, Son & Co., have just been awarded the contract for installing a complete telephone exchange for fifty subscribers at Campbellton, N. B., including switchboard, telephones, wires, etc. Messrs. Starr have also just received an order through their Quebec agents for five standard switchboards with the necessary telephones, etc. This speaks well for the superiority of the "Unique" telephones, manufactured by them, as in both instances the above were secured in face of strong competition. This firm have made a specialty of telephones for some time, and their make are well and favorably known all over Canada.—Halifax Herald, N. S.
