

The large brilliant fruit and ample foliage of this species make it the most ornamental of the deciduous-leaved Hollies of North America, and a desirable garden plant. It was introduced into cultivation in 1888 at the Arnold Arboretum.

he made in 1841 a long journey through the mountains of the southern states. Mr. Carey occupied himself specially with the study of the genus *Carex*, and contributed the articles on that genus and on *Salix* to the first edition of Gray's *Manual of the Botany of the Northern United States*. His herbarium of American plants was presented several years ago to the Royal Gardens at Kew.
