OKATKA PAINT, OKATKA WHITEWASH, PASTE, LEATHER HORSE, and all descrip tions of PAINT WHITEWASH, and SCRUB BRUSHES, FACTORY and OFFICE, Union corner Carmarthen Street,

ST, JOHN, N. B. PROSPECTUS

SPRING HILL MINING COMPANY INCORPORATED UNDER LAWS OF NOVA SCOTIA, 1870, C. 72. Capital \$400,000, with power to increase to \$1,000,000. SHARES \$50.

LIABILITY OF SHAREHOLDERS LIMITED TO THE AMOUNT REMAINING UNPAID ON THEIR STOCK.

2,600 Shares are offered by public subscription. \$5 per share to be paid on application; \$15 per share on allotment, 1st July, 1872; \$15 per share on 1st September, 1872, and \$15 on 1st November, 1872; or the whole may be paid on allotment, with deduction of interest at 6 per cent. per annum, on all payments in anticipation of the date when they become due.

DIRECTORS, &c.

Hon, ALEXANDER MACFARLANE, Senator, Wallace, Nova Scotia, President. Hon. ROBERT BARRY DICKEY, Senator, Amberst, N. S. CHARLES H. M. BLACK, Esq., Merchant, Halifax, N. S.

LT. Col. CHARLES J. STEWART, Amberst, N. S. ALEXANDER ROBB. Esq., Proprietor Amherst Iron Foundry, Amherst, N. S. TREASURER-JAMES S. HICKMAN, Esq., J. S. Hickman & Co., Merchants, Amherst, N. S.

SECRETARY-WM. J. MOFFAT, Esq., Barrister, Amherst, N. S. B NKERS-Bank of Nova Scotia, Amherst Branch; and Bank of New Brunswick, St. John, N. B. OFFICE-Mr. W. J. MOFFATS Office, Amherst, N. S.

The Company have acquired, by purchase, three leases from Government of Nova Scotia to Hon Alex. Macfarlane, of one square mile each, of the richest coal deposits in Canada, at Spring Hill, Cumberland County, Nova Scotia, renewable until August, 1926 Royalty 10 cents per ton of 2,240 lbs.

Five seams and upwards, of varying thickness from 2½ to 13 feet, are known to exfive seams and upwards, of varying thickness from 2½ to 13 feet, are known to exfive seams and upwards, of varying thickness from 2½ to 13 feet, are known to exfive seams and upwards, of varying thickness from 2½ to 13 feet, are known to exfive seams and upwards, of varying thickness from 2½ to 13 feet, are known to exfive seams and upwards, of varying thickness of the General Mining ist within these areas, which comprehend (exclusive of a portion of the General Mining ist within these areas, which comprehend (exclusive of a portion of the General Mining ist when a slope sunk only 25 feet from the surface, and has been proved by test pits about by a slope sunk only 25 feet from the surface, and preserving a thickness of 10 feet 1½ mile at an average of 10 feet from the surface, and preserving a thickness of 10 feet 1½ mile at an average of 10 feet from the surface, and preserving a thickness of 10 feet 1½ mile at an average of 10 feet from the surface, and preserving a thickness of 10 feet 1½ mile at an exemption of the down to the depth of for two thirds of that distance. The slope has lately been carried down to the depth of for two thirds of that distance. The slope has lately been carried down to the depth of for two thirds of that distance and preserving a thickness of 10 feet from the surface, and preserving a thickness of 10 feet from the head of the Bay Fundy and contemplated Bay Verte Canal, and 13 miles from a shipping place at the mouth of Maccan River, half a mile from the Intercolonial, between Truro and Amherst, next autumn, the coal will be hauled 4 miles to Black River Station.

From the nearness of the outcropt to the surface, and

the Intercolonial, between Truro and Amnerst, next autumn, the coal will be harded a miles to Black River Station.

From the nearness of the outcrop to the surface, and the seams lying on high and descending ground, securing easy drainage, it is considered that these seams may be most economically worked.

The freight of a ton from the head of Bay Fundy to Boston or New York is about 75 cents less than from Pictou or Sydney—of itself a good profit, while the difference to St. John is fully \$1.00.

The Spring Hill coal is well adapted for house, steam and smelting purposes. Situ-

St. John is fully \$1.00.

The Spring Hill coal is well adapted for house, steam and smelting purposes. Situated within \$7 miles by rail of the lodes of brown hematite and micaceous iron ore of the richest quality, known as the Acadia iron ore, of Londonderry, it is difficult to assign limits to the quantity of ore likely to be taken to pring Hill, for smelting by a sign limits to the quantity of ore likely to be taken to pring Hill, for smelting by a sign limits to the quantity of ore likely to be taken to pring Hill, for smelting by a sign limits to the quantity of ore likely to be taken to pring Hill, for smelting by a sign limits to the quantity of ore likely to be taken to pring Hill, for smelting by a sign limits to the quantity of ore likely to be taken to pring Hill, for smelting by a sign limits to the windle with the coal itself, must be extensively used in the iron and steel works at Londonderry, as well as the Machine shops being erected for the Government railways at Moneton.

The portion of the Intercolonial between Truro and Amherst is now being ballasted with engines driven by Spring Hill coal. It is understood that the line between Truro with engines driven by Spring Hill coal. It is understood that the line between Truro and Newcastle, if not the whole line to St. John, a distance of 280, miles will shortly and Newcastle, if not the whole line to St. John, a distance of 280, miles will shortly and steadily increasing.

is steadily increasing.

Vessels bringing flour from the St. Lawrence to St. John, Yarmouth, and other

Vessels bringing flour from the St. Lawrence to St. John, Yarmouth, and other

lower ports. through the Bay Verte Canal, when completed, may have return cargoes

of coal to Quebec, Montreal or Toronto.

From all these sources of traffic, in addition to the Western part of Nova Scotia.

From all these sources of traffic, in addition to the Western part of Nova Scotia.

afforded.

Additional means of shipment will be afforded by the contemplated railway to Additional means of shipment will be afforded by the contemplated railway to Parrsboro—a port open at least ten to eleven months in the year—for which the Nova Scotia Legislature have provided large subventions.

The estimated cost per ton for raising, handling, and putting on board ship, say at mouth of Maccan river, is about as follows:

Cutting and raising, including weighing, screening, &c....... 65 cents, Railway transportation, loading and royalty.................. 45
 Cost on board...
 \$1.10

 Freight to St. John...
 1.20

If Pictou and Sydney coal can be shipped to Boston and New York at paying prices. it cannot fail to be highly remunerative to send a better article from Spring Hill, with an advantage of 75 cents in freight. The local traffic would yield a high rate of an advantage of 155 cents in Toleran and a profit.

Taking the low average of only 80 cents per ton, inclusive of repairs of machinery, &c., and assuming only 100 000 tons as the annual production at first, we have a gain of 20 per cent. on the capital, which might be much augmented by the rent of other seams, as suggested. From the exceptionally high character of this coal, and the facilities for raising it cheaply, this quantity, it is confidently believed, might cre long the doubled or trebled, and a large rate of profit secured even with considerable increase of expital.

TESTIMONIALS.

Extracts from Reports of Messrs. Woodhouse and Jeffcock, Mining Engineers, London and Derby, G. B., (January 2, 1866) The Coal Field which we have carefully examined, and which is the subject of this Report, is situate in the county of Cumberland, in the province of Nova Scotia. It is generally described sathe "Springhill" Coal Field, but in reality it is a part of the great Cumberland Coal Field, as the "Springhill" Coal Field, but in reality it is a part of the great Cumberland Coal Field.

The first or upper seam we found to be a bed of remarkably good coal, presenting a very

Professor Henry Y. Hind, M. A., in his recent Report of Springhill Coal Field, thus sums up:
"Thickness of large Springhill seams 13 feet and 10 feet 3 inches. Quality of Springhill seams of the very first class. Distance of these from Parrsboro by rail, 25 miles. Known outcrop of the very first class. Distance of these from Parrsboro by rail, 25 miles. Known outcrop of STABLE AND ROAD Springhill main seam, 11 feet, on which operations could be immediately commensed, about 2 miles.

"The main seam, or what is supposed to be the main seam, has been traced for a distance exseeding one mile and a half in a northerly direction, on the Macfarlane areas."

In Professor Selywyn's, F. G. S. Report laid before Parliament, Session 1872, he thus refers to Mr. Scott Barlow's operations at Springhill: "The evidence, so far as it goes, appears to show that in a distance of about eight handred yards, horizontal measurement, across the strike of the measures, the eare eight seams of workable thickness, as under, in descending order. No. 1, 13 ft. 6 in.: No. 2, 6 ft; No. 3, ? ft. 4 in.; No. 4; 12 fc. 3 in.; No. 5, 2 ft. 6 in.; No. 6, a crop, thickness uncertain; No. 7, 4 fc., shaly coal; No. 8, 2 ft. Total, 42 ft. 7 in."

APPLICATIONS FOR SHARES must be made in the annexed form, and forwarded to the Bankers, or to the Secretary at the Company's Office, where the By Laws may Dated 12th June, 1872. FORM OF APPLICATION.

Addition to be signed by applicant desiring to pay all the instalments on allotment.)

desire to pay up my subscription in full on allotment, with deduction of interest at 6 per of annum on all payments in anticipation of the time they become due.

Persons wishing to subscribe for Stock in the above Company, or those desiring further information respecting the property, will please apply, by letter or in E. N. SHARP.
