

[PART II.—CO-OPERATIVE DAIRYING.]

	PAGE	Cheese—Continued.	PAGE
Accumulator	164	Qualities described.	210, 211
Acidimeter	185, 188	Standards	211
Acidity of milk for rennet- ing	184	Cheese exports declining	182
Acidity of cream	238	Cheesemaking—main feat- ures	183
Acidity—effect of in loss of fat in buttermilk	229, 240	Churning	240-244
Acid and rennet in milk	190	Cheshire cheese	214
Bandager	202	Churn—rate of turning	242
Bandage for cheese	202	Closeness in cheese	211
Best separator	235	Coloring milk for cheese- making	189
Boards of Trade	262	Color of cheese	211
Brushes	165	Combined churn and worker	243
Buildings for co-operative dairying	144	Composition of cheese	209
Butter:		Composition of cream	237
Granules	243	Composite samples	174
For market	247	Composite " thickened	175
Shipping boxes	247	Composite samples cooled to 65 degrees before test- ing	175
Tubs	249	Condensed milk:	
Composition of	250	Composition of	267
Not contain over 16 per cent. water	250	Factory	266
Qualities described	250, 251	Desirable qualities in	267
Classification, etc.	252, 253	Co-operative dairying:	
From sweet cream.	253	Advantages	135, 137
Saltless	254	Weakness of	138
Preservatives	254	Origin of	138
Camembert cheese	215, 217	Co-operative dairies:	
Cap cloths	202	Methods of establishing	142, 146
Cement floors	155, 156	Cost of building and plant	144
Cheddar cheese, origin	182	Site	144
Cheese and butter markets	260, 261	Private and joint stock companies	145, 146
Cheese:		Charges for making	147, 148
Factories in Canada	182	Co-operation not perfect	135
Constituents of milk	184	Cold-storage for cheese	205, 263
Salt	200	Corks for composite sam- ples	175
Hoops made of steel	202	Cream gathering <i>vs.</i> whole milk creameries	150-153
Presses	203
