"IT'S ONLY A COLD, A TRIFLING COUGH"

Thousands have said this when they caught cold. Thousands have neglected to cure the cold. Thousands have filled a Consumptive grave through neglect. Never neglect a cough or cold. It can have but one result. It leaves the throat or lungs, or both, affected.

Dr. Wood's Norway Pine Syrup

is the medicine you need. It strikes at the very foundation of all throat or lung complaints, relieving or curing Coughs, Colds, Bronchitis, Asthma, Croup, Sore Throat, and preventing Pneumonia and Consumption.

It has stood the test for many years, and is now more generally used than ever. It contains all the lung healing virtues of the pine tree combined with Wild Cherry Bark and other pectoral remedies. It stimulates the weakened bronchial organs, allays irritation and subdues inflammation, soothes and heals the irritated parts, loosens the phlegm and mucous, and aids nature to easily dislodge the morbid accumulations. Don't be humbugged into accepting an imitation of Dr. Wood's Norway Pine Syrup. It is put up in a yellow wrapper, three pine trees the trade mark, and price 25 cts.

Mr. Julian J. LeBlanc, Belle Cote, N.S., writes: "I was troubled with a bad cold and severe cough, which assumed such an attitude as to keep me confined to my house. I tried several remedies advertised but they were of no avail. As a last resort I tried Dr. Wood's Norway Pine Syrup and one bottle cured me completely."

FRUIT PLANTS

We will send the following, express paid, to any stockman in Manitoba, Saskatchewan or Alberta on receipt of \$5.00. 12 gooseberries of three varieties, 6 white currant, 6 black currant, 6 red currant, 12 red raspberry, 12 yellow raspberry, 12 black cherry. All strong two-year plants, guaranteed for this country, guaranteed home grown.

BURBANK NURSERY CO., St. Charles, Man

On page 367 of our issue of March 13th, a cut of one of the Galbraith horses appears. By an omission the ownership of the horse did not appear and the weight was erroneously stated, it being 1950 lbs., not 1250 lbs. as stated. The mistake in weight was self-evident to any horse judge.

SMUT PREVENTION

The provincial botanist at Regina issues the following advice re the prevention of smut.

No person should neglect to use a smut preventive each year on all seed grain. Farmers who have been in the habit of using bluestone for this purpose will be now looking for a supply and will in many cases be unable to procure it owing to a scarcity in the market. It may be pointed out, however, that formalin is just as effective a preventive and is indeed preferred by many.

For application to the grain one pound (16 ozs) of formalin may be mixed with 32 to 40 gallons of water. Immersion from 5 minutes to one hour will be found preferable to sprinkling if the grain appears smutty, and all smut balls should be removed if possible.

Never use smutty grain for seed, if clean can be procured.

Pickling machines which pass the grain through the liquid are better than those that merely moisten the grain, but several simple contrivances have been satisfactorily used by farmers, one of the best being a deep water-tight box about ten feet in length with a screen fixed in the middle. When this box is balanced on a log one end may be filled with the formalin solution and grain. When the grain is soaked sufficiently the box may be tipped so that the liquid will run through the screen to the other end, in which has been placed more grain. The liquid should be replenished from the barrel in which it has been mixed in proper proportion.

A bushel of wheat will take up about three-quarters of a gallon of liquid and oats will take about a gallon and a half to the bushel.

When grain has been sprinkled or dipped it should then be covered for an hour or two to retain the fumes of the formalin and then sown as soon as possible.—Department of Agriculture, Regina, Sask.

PROFESSOR SNYDER ON WHEAT AND FLOUR FROM THE EDMONTON DISTRICT.

Secretary Fisher, Edmonton Board of Trade, states that "to ascertain whether wheat raised in the Edmonton district contains the constituents necessary to the production of the very highest quality of flour, samples of wheat and flour were sent to Professor Snyder, chemist of the Experiment station of the University of Minnesota, Prof. Snyder being recognized as one of the highest living authorities on the chemistry of wheat and flour. The sample of wheat sent consisted of a mixture of samples from two different farms, being apparently moderately pure Red Fyfe, grading 1 Northern, being such wheat as any of our farmers might raise. In addition there were sent a sample of one of the best known brands of Manitoba patent flour, and a sample of patent flour from each of our local mills. The flours were referred to by numbers only, the Manitoba flour being numbered "2" and the Edmonton flours "3" and "4" respectively, and no intimation was given Prof. Snyder as to the origin of either wheat or flour.

"The report furnished by Prof. Snyder as the result of his analysis was as follows:

"The samples of wheat and flour have been received and tested. The wheat gave a test weight of 62½ lbs per bushel; the kernels were fairly uniform, and of good color. There were very few lighter colored, and what are commonly called starch kernels present, but these were sound, and so small in amount as to have no effects on the quality of the flour. The wheat yielded a good gluten, having a creamy color, good powers of expansion and other desirable physical properties. When tested for total proteins the wheat yielded 14.33 per
