

The frequent starts and stops in city service necessitate a brake equipment instantly responsive to application and release and sufficiently rugged to withstand hard continuous usage.

## The Westinghouse SME Straight-Air Brake With Emergency Feature

fulfils these requirements admirably. In service stops it has all the flexibility and responsiveness of the ordinary straight-air brake whether operating motor cars alone or with trailers, and in addition when trailers are handled complete protection against such emergencies as train parting or hose bursting is provided, as in such event brakes apply in emergency automatically on both motor and trailer. Quick and full response to emergency applications at the motorman's valve is also insured.
