THE MODERN PERIOD

The Dominion census figures are as follows :

| | | | Rural | | | Urban |
|----------|--|--|-----------|--|---|-----------|
| 1911 | | | 1,194,785 | | | 1,328,489 |
| 1901 | | | 1,246,969 | | • | 935,978 |
| Increase | | | | | | 392,511 |
| Decrease | | | 52,184 | | | |

It will thus be seen that during the past twenty-five years there has been a steady increase in the consumers of food products in Ontario and a slight decrease in the producers of the same. The surplus population of the farms has gone to the towns and cities of Ontario and to the western provinces. Now for a moment let us follow these people to the West. Many of them have gone on the land to produce wheat. Wheat for the European market has been their principal product, therefore they in turn have become consumers of large quantities of food that they do not themselves produce but must obtain from farmers elsewhere. But not all who have gone West have become farmers. The Dominion census of 1911 gives the following statement of population for the provinces and districts west of Lake Superior :

| | | | Rural | | | Urban |
|----------|--|--|-----------|---|---|---------|
| 1911 | | | 1,059,681 | | | 681,216 |
| 1901 | | | 446,050 | • | | 199,467 |
| Increase | | | 613,631 | | 1 | 481,749 |

The western provinces are generally considered to be almost purely agricultural, and yet the percentage increase of urban population has been nearly double the percentage increase of rural population. And this rapidly growing urban population also has demanded food products. Their own farmers grow wheat and oats and barley. British Columbia produces fruit for her own people and some surplus for the prairie provinces. There is some stock-raising, but the rapid extension of wheat areas has interfered with the great stock ranches. From out of the Great West, therefore, there has come an increasing demand for many food products. Add to this the growing home market in Ontario, and, keeping in mind that
