

EXPLANATION.

In the following Calendar, the times of the Sun's rising and setting are the times shown by correct time piece when the sun is in the horizon. The column marked Sun South, are the times shown by a correct time piece when the centre of the Sun is on the Meridian, or in other words, when it is noon by a correct noon mark or dial. For example, when it is noon by the Sun on the first day of January, it would be four minutes after 12 o'clock by a correct time piece. To know where the Sign is, compare the character opposite the day of the month in the column of Moon's Places, with the explanation of the Signs of the Zodiac, below.—The other matters are so plain as to need no explanation.

EXPLANATION OF ASTRONOMICAL SYMBOLS AND ABBREVIATIONS.
