### A Report On The Alaska Highway

(By Murdock Whiteomb)

Editor's Note: This is not necessarily the prize winning technical paper. Of all the papers entered in the Technical Paper Contest; this one was thought to have the widest interest range and has been published for this reason.

I have travelled the fifteen hundred miles of the Alaska Highway northwest from Dawson Creek, British Columbia to Fairbanks, Alaska. It is more than just fifteen hundred miles of road; fifteen hundred miles of great engineering achievement, the gateway to Alaska, the lifeline of of the most beautiful mountain the north, and the nucleus of a rapidly growing Canadian Northwest. lakes in the world. The side of the With these ideas in mind, let us look more closely at this Alaska Highway. Let us see what it is, where it is, and what it means to Canada. to run consisted of a perpendicular and to us as Canadians.

The Alaska Highway was first built during 1942 by United States Army Engineers as an overland lifeline to relieve Alaska from the war time hazards of shipping. The highway followed a line which the road, and it is not uncommon enabled it to link up the chain of airfields in the Northwest Staging to find two and three foot bould-Route at Fort Saint John, Fort Nelson, Watson Lake, and Whitehorse. These airfields had been built by the Canadian Government in 1941.

Joe began early to earn his way in the world by sell- but there will never be an end to

While Joe was still a small boy edly): five hundred miles to the north undergoing extensive repairs. The which has since levelled off to his father was lost at sea. His rick's Industrial School near Saint John until she too died a few years later. Joe's older brother continued to support him for a time Then the brother was killed while working in a stone quarry. Joe. now about thirteen, and starting in the seventh grade, was faced with the choice of accepting charity or being "forced out" working for a farmer for his board and clothing.

Joe elected to go to work and was sent to a farmer in a small community far up the Saint John River valley. Here he was ill treated and neglected, and finally wrote his priest in Saint John of his difficulties. He was given per mission to go to another farm in a different part of the province. This was a happier home and Joe remained there for some time before returning to Saint John to work at the dry docks. In Saint John, he renewed his acquaintance with two lads, brothers whom he had first met at the Industrial School. The boys and their mother made him one of the family, and for the rest of his life this was home to Joe.

Then came World War II and, in 1940, Joe felt it was time to get in uniform and began haunting recruiting offices only to be turned down over and over again because he was underweight. But Joe was never easily turned aside from the chosen path. The recruiting officers' resistance was finally worn down and Joe was accepted by the army though he was warned that his chances of getting overseas were non-existent

In 1943, however, Joe went over seas with the R.C.A.M.C. as a medi cal orderly. He landed in Nor mandy on D-Day with the invasion forces. Here he helped to care for the wounded on the beaches through France, Belgium, Holland

and in Germany where he remained for a time with a hospital unit.

After his repatriation to Canada Joe learned of the rehabilitation plan for the veterans, whereby they might complete and further On July 27th last, friends and their education. He determined to
