Duration 2 50

Digits eclipfed 11 1-3 on the Sun's South Limb. The Moon makes her first impression on the Sun's Disc about 93 Degrees from the Sun's Vertix on the right hand. It will be total in the northern parts of the United States, its Center passing over Lakes Michigan and Erie, the Gennesee Country, and very near Albany and Boston, thence out into

the Atlantic Ocean to the Southward of Nova-Scotia.

This Eclipfe, which had travelled Expansum ever fince the Creation, fell in open Space quite clear of the Earth at every return of the Chaldean Period 'till the Year A. D. 967 when it first began to enter the Terra Australis Incognita, at the South Pole; fince which it has continued to wear to the northward at each periodical return, and according to the mean motions of the Sun, Moon, and retrocession of the Lunar Nodes, will go off at the North Pole about the Year A. D. 2355, whence it again commences its etherial Circuit, from which it will not return to the Earth, so as to perform the same revolution over again, in less than 12,492 Years.*

3. Of the Sun on the 9th of December, at 10h. 10m. P. M. invilible.

*The Ecliptic Limits in the above Calculation, are taken at 18 degrees from the Moon's Node.

ANECDOTES.

Sir Thomas Burnet was diftinugified for the evenness of his temper, of which the following instance was recorded. Dining with a friend, the coachman, who was waiting, split some soup or gravey upon his clothes. While they were rubbed, he said, with great good humor, to the coachman, "Let me advise you, friend, for the suture, to grease nothing but your wheels."

A beautiful girl on a fleighing party, was requested to put on a fox tippet, the gentleman who proposed it, though he shewed something of good-breeding, --- however, she refused, and replied with the greatest sang froid—" if I use so much Fox, about my person I shall soon have all the Hounds after me."
