## "I want You to Use My Pedlar's Perfect Culvert for Permanent Construction or Quick

### and Perfect Repair Work.

**You need a Culvert with Deep Corrugations for Maximum Strength.**

"My Perfect Culvert has extra deep and narrow corrugations, which give great strength for least weight. You can do surface work, save extra deep excavating, and time of installation.

"This applies to my Nestable Culvert with flanges that clamp sections together or my Riveted Culvert which you get ready-built. Both kinds are extra strong. Both are easy to install, and will stand any weights claimed."

**You need Special Culvert Metal to Prevent Rust.**

"Every Pedlar Culvert is made in 'Toncan Metal,' which does not rust or corrode because it is specially made to resist electrolysis. It is even throughout. Steel and iron pit, and fall to pieces because they are 'spotty' and irregular. This makes electrical currents that eat the metal.

"But Pedlar Culverts stand locomotive fumes, gases, etc., because electrolysis cannot start in the 'Toncan Metal.'"

**You need a Handy and Easily Set Culvert.**

"My Culvert comes in nestable sections and in lengths riveted together. If you have a narrow culvert to set, my Perfect Culvert fits. Add or take away sections to get the exact length. Your men can do this easily.

"You get just the length you want. Sections are interchangeable. This culvert is handy, easy to set, always ready for emergencies and rush work."

**It is strong.**

**It is easy to set.**

**I make it in "Toncan Metal," which is Rust Resisting.**

**You can do Perfect Work with it.**

**Write me and Tell Your Exact Needs."**

**If you need Special Work, Pedlar Culvert may be had in Special Units.**

"I make special units for special work with my Perfect Culvert. If you want a Power Flume, you can get a special gauge. If you need a syphon for an irrigation line, we can build it. There are scores of engineering uses for Pedlar Culvert with special fittings, from well-curbings and sewers to factory smoke stacks—we make the fittings for you. Write your specifications."

**Pedlar Culvert meets all Emergencies Exactly.**

"This is a permanent culvert and an emergency culvert as well. You can repair a washout in quick time. You can replace a broken concrete or brick arch culvert with minimum excavation. Your Pedlar Perfect Culvert is always ready to be set in any length at any depth at any grade under any conditions."

**Learn How Useful it is for Special Needs.**

"I want you to learn how useful it can be. Write me to the nearest address. It is frost-proof, rust-resisting, strong, labor saving and adaptable to all kinds of engineering where water is to be carried, quick-sands bridged, or special drainage needed to meet all kinds of conditions. It is pipe or conduit, wherever rust-resisting, fume-resisting, pressure-resisting construction is needed. Write to-day."

*G. B. Pedlar*

**Write for Booklet.**
