

"The Linn HAULS the Load"

Under Varying and Adverse Conditions

Logging Operations in the Canadian Woods During the Past Winter Have Abundantly Proven the Particular Qualifications of

THE LINN LOGGING TRACTOR

To Perform the Work for which it was especially designed and constructed.

The above illustration shows the Linn Logging Tractor hauling logs on the operation of the International Land & Lumber Company, Limited, near St. Felicien. (District of St. John, Que.)

In northwestern Quebec the snow came very late last winter. At the time the photograph was taken there was barely a foot of snow in the bush—yet, the Linn Logging Tractor was hauling its trains of logs to the dump—over poor roads—up bad grades and down steep hills.

The International Land & Lumber had completed their haul by the first of March. Their haul was about seven miles—and, **even though their overhead charges included 100 per cent. depreciation on the Tractor in the first year**, they report that, including all their costs from skidway to dump, (including the cost of hauling water for sprinkling over a distance of four miles from the nearest water hole to the point where it was used) **their logs cost but \$3.50 per thousand feet at the dump.**

For further information concerning Linn installations, write or wire.
