SERBIA WAR-SHATTERED

Once Beautiful Belgrade is Plundered and Devastated by German Army

Gustav Habermann, Czech Deputy in the Vienna Parliament and member of the Austro-Hungarian Delegation, visited Belgrade from January 3 to 10 on an excursion arranged by the Ministry for Foreign Affairs for the members of the Austrian and Hungarian Delegations. Habermann is today the real ruler of Czech-Slovak social democracy. He later contributed the following to the Prague paper "Pravo Lidu":

"In all parts of the town one sees numerous evidences of the fighting that went on in the streets as well as the results of the terrible speech of guns of all calibres. Few buildings have been spared.

"All that has not fallen a prey to shells, bullets and the fury of street fighting has been destroyed, by the looting of the victor. The German army exercises a so-called right of plunder whereby it is authorized during two whole days to seize the goods and property of the inhabitants of the places taken by force of arms. In Serbia the army has made extensive use of this right. Public buildings such as the Royal Palace, the theatre, the House of Parliament and the Ministries have been looted to such an extent that only the bare walls are left.

Objects of Value Gone.
"Within these buildings recall the old castles of Bohemia, which have stood untenanted for dozens and even hundreds of years. The frames of the windows and doors have been wrenched off and taken away. All objects of value have disappeared; others have been smashed; all that could not be carried off was ransacked. Domestic hearths and private buildings succumbed to the blow of the right of plunder.

"Many doors and windows are secured with boards. Many windows are still without panes and a considerable number of houses look untenanted. Before the war the town numbered 100,000 inhabitants; at present barely 50,000 of the native population are left.

War in Most Odious Form.
"In spite of obvious efforts made to efface the traces and effects produced by the fury of war, we realize at every step that war has shown itself here in its most odious form.

"In spite of having endured untold ravages, the town even to-day strikes one by its extremely pleasant and agreeable aspect. Wherever one enters one always feels that an industrious people, refined, conscientious and original in its work, has lived in this place."

GRAND TRUNK RAILWAY SYSTEM
TIME TABLE CHANGES.

GREAT POTATO WASTE

Can Be Prevented by Thorough Spraying.

Women's Meetings in Full Swing—The Summer Institute Meetings Are of Benefit to Every Woman Who Attends—Topics to Be Discussed and Work Planned.

(Contributed by Ontario Department of Agriculture, Toronto.)
POTATOES are sprayed to prevent such fungus disease as Early Blight and Late Blight and Rot. These diseases are caused by plants known as fungi whose fungi which derive their nourishment from living plants injure them in so doing in various ways and thus give rise to what are known as fungus diseases.

In combating the great majority of fungus diseases methods of preventions only are practicable. Spraying potatoes is not done to cure but to prevent disease. In other words the object of spraying is to cover the surface of the leaves and stems with a protective poison, so that the spores of fungi, in which they cannot grow and penetrate the plant. Spraying, therefore, in order to be effective, must be timely and thorough.

The spray mixture must be on the plants before the spores reach them and the surface of the leaves and stems must be covered so completely that there is not the smallest space on which a spore can germinate.

Efficient spraying of potatoes depends:
1. Upon the use of the proper fungicide. Bordeaux mixture has so far proved to be the only satisfactory spray mixture for potato disease.

2. Upon timely and repeated spraying. Spraying should be commenced when the plants are from six to eight inches high and repeated at intervals of from a week to ten days throughout the growing season. From three to seven applications will be required, the number depending upon the weather, the wetter the weather the more frequent the spraying.

3. Upon the liberal use of Bordeaux mixture. From 50 to 150 gallons of Bordeaux mixture should be used per acre at each application.

4. Upon thorough spraying, which means the covering of every portion of the plant with the Bordeaux mixture in the form of a fine mist. This can be done only when the solution is applied with good pressure so as to insure covering every portion of the plant. The best form of spraying are obtained when potato sprayers are used which are fitted with T-joint attachments, so as to insure covering both surfaces of the leaves at each spraying.

5. Upon spraying before rather than after prolonged rainy periods. Infection of the plants takes place during or soon after rain, therefore, if it is of the utmost importance to have the spray mixture on the plants when the rain comes.—Prof. J. E. Hewett, Ontario Agricultural College.

The Importance of Women's Institute Meetings.
A series of meetings which, to the women of rural Ontario, have always proved worth while, and increasingly so the last year or two, is the Women's Institute meetings. These are important because they are so far-reaching in their nature. They afford the town and country woman, no matter what her denomination may be, a channel through which she can be of all-round service to humanity.

Since the war began Red Cross and other patriotic work has, of course, received first consideration. The alleviation of suffering seems peculiarly woman's work. The need is greater to-day than ever.

The great demand by the Allies for certain foods such as beef, pork, wheat and sugar has caused the housewife to change her methods of pre-war days. She must now learn to substitute and to eliminate various forms of waste. Perishable foods must be more widely used, not only in summer, but also in winter. These must be conserved through proper storage, canning or drying. Such subjects as these may be discussed at the meetings. An expert demonstrator may be secured from the Department to give information or a practical demonstration to assist the housewife. The members may club together and do the canning at one centre with one fire if they so choose, and in addition to the work accomplished may have a social time together.

The children of rural districts must not be forgotten. They must be prepared for the great responsibilities which are too soon to fall upon them. Their education must not be neglected. They must not be handicapped by physical imperfections. Subjects of importance to the child must be discussed and means adopted to improve conditions. The Medical Inspection of rural schools and the clinics held through the Women's Institute are doing much to improve conditions.

The girls also need attention. We are apt to forget the girls in our anxiety for the boys. Their lives and their prospects for the future are being affected by this war. Hence opportunities should be arranged for developing their talents to the full, must be afforded them. Many of these opportunities may be secured through the Institute.

Surely with subjects of such vital importance as the above-mentioned, all meetings should be worth while.

We would call the attention of all to the importance of the summer meeting, held throughout June, when the delegate from this Department is in attendance. She has the latest information on all subjects of importance to the Institute and is a specialist on her own particular subjects.—G. A. Putnam, Superintendent Women's Institutes.

Coles Shoe Co., 122 Colborne St., are offering for the new Ladies' White Canvas, Black Canvas and Leather Pump, and Strap Slippers at \$1.49, regular old time prices.

GLASS OF SALTS IF YOUR KIDNEYS HURT

Eat less meat if you feel Backache or have Bladder trouble.

Meat forms uric acid which excites and overworks the kidneys in their efforts to filter it from the system. Regular eaters of meat must flush the kidneys occasionally. You must relieve them like you relieve your bowels; removing all the acids, waste and poison, else you feel a dull misery in the kidney region, sharp pains in the back or sick headache, dizziness, your stomach sour, tongue is coated and when the weather is bad you have rheumatic twinges. The urine is cloudy, full of sediment, the channels often get irritated, obliging you to get up two or three times during the night.

To neutralize these irritating acids and cast of the body's urinous waste get about four ounces of Jald Salts from any pharmacy; take a tablespoonful in a glass of water before breakfast for a few days, and your kidneys will then act fine and bladder disorders disappear. This famous salt is made from the acid of grapes and lemon juice, combined with lithia, and has been used for generations to clean and stimulate sluggish kidneys and stop bladder irritation. Jald Salts is inexpensive, harmless and makes a delightful effervescent lithia-water drink which millions of men and women take now and then, thus avoiding serious kidney and bladder diseases.

Efficient spraying of potatoes depends:
1. Upon the use of the proper fungicide. Bordeaux mixture has so far proved to be the only satisfactory spray mixture for potato disease.

2. Upon timely and repeated spraying. Spraying should be commenced when the plants are from six to eight inches high and repeated at intervals of from a week to ten days throughout the growing season. From three to seven applications will be required, the number depending upon the weather, the wetter the weather the more frequent the spraying.

3. Upon the liberal use of Bordeaux mixture. From 50 to 150 gallons of Bordeaux mixture should be used per acre at each application.

4. Upon thorough spraying, which means the covering of every portion of the plant with the Bordeaux mixture in the form of a fine mist. This can be done only when the solution is applied with good pressure so as to insure covering every portion of the plant. The best form of spraying are obtained when potato sprayers are used which are fitted with T-joint attachments, so as to insure covering both surfaces of the leaves at each spraying.

5. Upon spraying before rather than after prolonged rainy periods. Infection of the plants takes place during or soon after rain, therefore, if it is of the utmost importance to have the spray mixture on the plants when the rain comes.—Prof. J. E. Hewett, Ontario Agricultural College.

MRS. RUBY L. FLEMING,
director of the "Red Cross" stenographic forces in Russia. She is a Canadian and the second daughter of the late J. W. Lester of London, Ont.
