

to the Government of India for full commercial use in India. This information, which has been valued by the Government of India at \$5 million, is to be transferred without cost to India and without deduction from Colombo Plan or other assistance.

Under another Agreement between the two Governments, Canada and India will cooperate in the construction of a nuclear power station of the CANDU type with a net electrical output of 200 megawatts to be located at Rana Pratap Sagar, Rajasthan State, in India. The Indian Department of Atomic Energy will act as prime contractors and be responsible for the erection of the station. Canada will provide the design with detailed working drawings and specifications of the station up to the steam raising equipment while India will provide the design for the rest of the station.

Half of the initial charge of uranium fuel will be procured from Canada ⁴¹. Canada will also supply such additional fuel for the station as may be required by India from time to time, provided that Canadian fuel is not more expensive than other foreign fuel.

The Government of Canada will provide, under the Export Credits Insurance Act, credit facilities for the purchase of services, material and equipment supplied from Canada which is estimated to cost approximately \$35 million; the total cost of the project is about \$70 million.

This station will make a valuable contribution to the power needs of a vital region in India.

* At current prices, this half supply would be worth approximately \$2.1 million.
