Drug Reports.

General business is fairly good, all though the severe snow storm has interfered a good deal with transportation of goods. The general tone of the markets has an upward tendency. Carbolic acid at the moment is somewhat easier in price, but we do not expect a material change for some little time.

Coal tar products are at a premium on account of small stocks and the impossibility of replacing them.

Turpentine, resins, boiled and raw oils are higher. Quinine has made another advance during the past month. Camphor is very firm, and no doubt still higher prices will rule. Pot. Iromide is 5c. lb. higher. Galls, tannic and gallic acid much higher. Carbon Sulph has advanced 5c. lb. Patent salid oil is higher.

The Important Part

It is more important to put good advertising matter in your ads. than it is to make them big and boisterous — *Press and Printer.*

No investment in advertising is too large if it brings proportionate results.

The words that everybody knows are the words that nobody will misunderstand when used in advertising.

The clerk who has ingenuity enough to keep himself busy when trade is dull, is the one who is most valuable during a rush or a busy season.

Some men are too lazy to keep books properly, while some don't want to know how they stand, as they are afraid to face the facts and hope somehow to pull through by "good luck".

Cement for Glass—According to the *Chemiker-Zeitung*, an excellent cement for glass is made by mixing a saturated solution of India-rubber with a concentrated solution of water-glass. An emulsion is said to be formed which adheres very well, will withstand water, and is also transparent.

To Cut Sheet-Brass Chemically—Draw a line across the brass plate with a solution of mercury salt, moisten the line with nitric acid, and it may easily be broken like glass. The salt is decomposed, the mercury forming an amalgam with the zinc and the nitric acid attacking and dissolving the copper.
