

ducts a fair jobbing trade can be reported with quotations unchanged from last week. Hams show more activity and command 12 to 12½c. There is a good demand for other smoked meats. Rolls are jobbing at 8½c., with the enquiry rather brisk. Prices of cheese show no change and the market is steady.

The *Ingersoll Chronicle* says: "A deputation from the Eastern and Western Dairymen's associations waited on the Hon. A. M. Koss on Thursday last and asked for an increase in the grants to the associations. The grant is now \$1,500 to each association, and the proposal was that it be doubled, making \$3,000 to each association, or \$6,000 in all. Instead of having two instructors for the East and two for the West, it was proposed that there be six for each, and that there be a thorough visitation of the cheese factories every year: that the instructors should start out in the spring, covering all the factories in a short time, giving instruction with a view to making a uniform article throughout the province. It was also suggested that the professor in the Agricultural college who deals with this subject should meet the instructors and other prominent dairymen at some central factory, that their notes could be compared and experiments of various kinds decided on. The commissioner said he would lay the matter before the Government."

Dried apples are dull and sell only in a jobbing way at 6c. Evaporated are steady at 14c.

#### RECENT TESTIMONIAL.

COMMERCIAL BANK OF MANITOBA,

WINNIPEG, Feb. 24th, 1887.

Messrs. The E. & C. Gurney Co., Winnipeg.

DEAR SIRS,—I have much pleasure in stating that the Hot Water Heating Apparatus put into my house by you last spring has been most satisfactory in every way. Its capabilities have been thoroughly tested during the last two months, which have been the coldest months of the winter, the thermometer ranging from 30° to 40° below zero, and the result has been the most perfect comfort in every part of the house. I have had some experience by the various modes of heating in use in this Province, and I have no hesitation in saying that your Apparatus is, in my opinion, far ahead of any of the others I have known. Its special merits are; 1. Equitable distribution of heat. 2. Absence of draught, dust and noise. 3. Economy of fuel. 4. Economy of time in attending to it, owing to its simplicity.

Yours truly,

D. A. McARTHUR.
