SEEDS—Vegetable and Flower.

PLANTATIONS and VISTAS formed.

LAWNS and FLOWER GARDENS laid out with taste, and beautified.

It is J. HARRIS' special object to prosecute the above useful and important branch to its utmost extent; and thus to enable the inhabitants of New Brunswick to supply themselves with Fruits, Vegetables and Flowers of every possible description, and of the most superior quality. Every year the enterprising Cultivators of older Countries are advancing in Horticultural improvements; and there is no reason why this Province, with its fertile soil and salubrious Climate, should not fully participate in the beneficial progress of one of the noblest and most advantageous of human pursuits.

J. Harris' Establishment is designed peculiarly to effect this object: it is his determination, if adequately supported by the public, as far as possible to introduce, to acclimate and grow in his Nursery, all the rare and valuable Vegetable and Floral Products and Fruits of Foreign Climates; to the end that they may from thence be successfully cultivated throughout the Country.

J. H. confidently invites inspection of his Establishment; and solicits that public patronage which is so necessary to its successful maintenance and improvement.
