

THE LITTLE GIANT
Thresher & Separator,

[FOR A FARMER'S OWN USE.]

And the Ohio and Buckeye Combined
SELF-RAKING REAPER & MOWER,

(Which was awarded the first prize at Tuckersmith, Co. Huron, on field trial,
last harvest.)

MADE BY JOSEPH SHARMAN,
At his Agricultural Works,
STRATFORD, ONT.

THE GIANT THRESHER AND SEPARATOR is capable of threshing from 200 to 300 bushels of wheat per day. It threshes perfectly clean and it is impossible to make it throw grain over, having a peculiarly constructed shoe. It is simple and can be worked by any one. It has no canvas elevators nor sieves which in other machines are a continual annoyance. It can be driven by six horses, and a good day's work can be done by four horses, with a good horse-power, &c. Any person having a 6½ ft. or 8 ft. single pinion horse-power will find it has sufficient power to drive it. It takes up but little room on the barn floor, and is easily moved about, being placed on wheels. No machine ever made by us has given such universal satisfaction. It is the best Threshing Machine for a Farmer's Own Use in the country, while the price places it within the reach of almost every farmer.

Orders for next season's Self-Raking Reapers and Mowers will require to be given in before 1st April.

JOSEPH SHARMAN.
