The American Iron and Steel Association collects and publishes annually very complete statistics of the production of iron and steel in Canada, as well as in the United States, and we are indebted to this authority¹ for the following statistics of the production of finished rolled iron and steel in Canada:—

Finished Rolled Iron and Steel.—The production of finished rolled iron and steel in Canada in 1908 amounted to about 496,517 long tons, as compared with about 609,179 long tons in 1907, a decrease of 103,662 tons or over 17·2 per cent. Of the total production in 1908 about 65,505 tons were iron, and about 431,012 tons were steel, against about 81,093 tons of iron and about 519,086 tons of steel in 1907.

The following table gives the production of leading articles of finished rolled iron and steel in Canada in the last five years:—
