

MACMILLAN'S MEDICAL SERIES

MORSE and TALBOT. Diseases of Nutrition and Infant Feeding. By John Lovett Morse, A.M., M.D., Professor of Pediatrics, Harvard Medical School, and Fritz B. Talbot A.B., M.D., Instructor in Pediatrics, Harvard Medical School.

Cloth, Crown 8vo, 346 pp., index, \$2.50

This important new work is based on the unique methods of the Pediatric Department of the Harvard Medical School. By these methods *the food is fitted to the baby and not the baby to the food*, while all procedures are presented for a definite reason and on a scientific basis. There has, up to the present, been no book in English presenting in detail the physiology of digestion and metabolism in infancy—which must form the basis of all scientific and rational infant feeding—and none describing in detail how to feed babies according to the indications in the individual case.

MEARA. The Treatment of Acute Infectious Diseases. By Frank Sherman Meara, M.D., Professor of Therapeutics, Cornell Medical School; Attending Physician, Bellevue Hospital.

Cloth, 8vo, \$3.50

A widely known teacher has written this book along new and very unusual lines. The chapters deal with individual diseases in a thoroughly practical manner, each little detail of procedure being explained so that the reader may actually apply it. The reason for each procedure as based on our latest information is given with respect to both physical therapy and drugs.

Of especial importance is the *Summary at the end of each chapter*, where the most important points of the chapter are tabulated for the use of the student's review and for the busy practitioner.
