Fated to be Bachelors.**CELEBRITIES WHO LIVED IN VAIN**

Probably no man of fame has gone to a bachelor grave without one or more escapes from Cupid's dart, however indifferently he may have professed to regard love.

Even Alexander Pope, with all his scottish deformity, was as vulnerable as any Adonis of his day. He lost his heart a dozen times, to as many women, from Martha Blount, his boyhood's sweetheart, to Lady Mary Wortley Montagu, who referred to him on one occasion as "a great baboon." And it is said that one of his lady-lovers, killed herself when her guardians sent her abroad to cure her of her infatuation.

David Hume, the historian, made one and only one, offer of marriage, and resigned himself to a life of bachelorhood when the offer was rejected.

POSTED HIS PROPOSAL.

Gibbon, the author of the "Decline and Fall of the Roman Empire," would have found happiness with Susanna Church, a lovely and gifted Swiss girl, if his autocratic father had not frowned on the match. And Buckle, author of "History of Civilization," might have married her had he thought it possible to face wedded life on less than \$3,000 a year.

Charles Lamb—that delightful essayist—resolutely turned his back on wedlock, even when he knew that Anna Simmons' heart and hand were his for the asking, because his sister Mary required an undivided care. His life was at once a tragedy and a romance of self-sacrifice. And Horace Walpole's affection was distributed among so many fair women, from Lady Ossory to the charming and talented Berry sisters, that he could never make up his mind to a definite choice of a wife.

The heart of the great American story-writer, Washington Irving, was buried in the grave of the beautiful girl to whom he had given it, when consumption took her from him in her seventeenth year.

"She died in the beauty of her youth," he wrote, "and in my memory she will ever be young and beautiful." Theodore Hook, though he died a celibate, had his share of love-adventures; and it was only lack of courage at the last moment that kept him from the altar. He had actually posted a letter of proposal when his heart failed him, and he recovered the missive just as it was starting on its fateful journey.

"The Slave of a Woman."

On being reminded one day in later years, after a long and tirade against matrimony—"it's a certain lady had been alive, even you would to-day be the 'slave of a woman,'" he retorted—"A woman, no, no! She was not a woman, but an angel!"—Tit Bits.

Worlds With Many Moons.

Queer Facts About Jupiter and Saturn. If you look at the south-eastern part of the sky as soon as it is dark, you cannot help seeing the giant planet Jupiter, for it is by far the brightest object in that part of the heavens.

Quite near it, rather higher and a little to the right, is Saturn, the second largest of the worlds which hurry around our sun.

Each of them has quite a family of moons. Jupiter owns nine and Saturn ten. Many of them are about the same size as our own satellite, Saturn has, in addition, a wonderful system of rings, which lie inside the path of its nearest moon, and these must stretch across their night sky in a great band of light.

Planets' Ten-Hour Days.

Both of these planets are gigantic fellows. Jupiter's diameter is about ten times that of our own earth, but so quickly does it spin that a day lasts only nine hours and fifty minutes. When Jupiter becomes inhabited—it is still too hot for life to exist—those who live on its surface will be quite different creatures from ourselves. We should find it impossible to stand erect on this great planet owing to the enormous force of gravity.

Saturn, too, is not yet cool enough for life to exist upon it, though it is much cooler than Jupiter. It also has a very short day, turning on its axis once in ten and a quarter hours. Saturn is 886,000,000 miles from the sun, nearly ten times as far away as we are.

The short days must be very dark owing to the small share of sunlight it receives. On the brightest summer's day the light on it is little brighter than it is with us at twilight.—Tit Bits.

Finding Oil by Wireless.**APPARATUS THAT OVERCOMES SPACE.**

An amazing claim has been made by two French scientists, Dr. Henri Moineau and M. Regis. They declare that they have invented an apparatus by means of which they are able to discover oilfields, not only in the ground beneath their feet, but also in land, hundreds and even thousands of miles away.

From a station at Clermont-Auvergne, in Central France, M. Regis has

Successful Newfoundland Ladies

Among the recent arrivals from the U.S.A. waiting their homeland on a vacation, are the Misses Helena and Maud Baitcock, formerly of Brigus South, Ferryland District, and daughters of the late Martin Baitcock, a well known planter of the same place. The Misses Baitcock left here some years ago, and on entering their adopted country, took up the nursing profession. Nurse Helena Baitcock holds her certificate from the "Truro General Hospital," Maine, and also has to her credit a Post Graduate course from the Elms City Hospital, New Haven, while her sister, Nurse Maud, is certificated by the Arlington-Simms Hospital, and is also a graduate of Brooklyn Avenue Infants Hospital, and possesses also a training in contagious diseases, having taken her course at Providence, R.I.

discovered an oilfield in the Rocky Mountains in America, while from the same position he has detected oil in Saxony, Hanover, Czechoslovakia, Italy, Sardinia, and Corsica.

The invention is an adaptation of wireless telegraphy. It has been known for some time that great long waves of short length were used in sending messages, and it was agreed that the lower part of the waves were absorbed into the ground.

Hertz, the great wireless pioneer, discovered that waves were affected by the various substances over which they passed, and Regis and Moineau set to work to note the effect that the different kinds of earth had upon electrical waves. In this way they discovered the machine which has given such remarkable results.

It is stated that not only oil, but coal, water, and even gases can be located by the new apparatus, and it has been suggested that when such supplies have been discovered, X-Ray photographs from the air can be taken to show the best spots for boring.—Tit Bits.

The Poor Indian.

For all we know, there are almost as many Indians in the United States to-day as there were when George Washington was living. The American Indian is stationary, but he is not disappearing. The official figures for 1920 place our Indian population at 336,000. Fifty years ago (1873) there were 313,000 American Indians in the United States. In 1873 there were 302,000.

We may surmise that among the white population of the United States, there are many thousands half-breeds of Indian ancestry.

There are Indians in twenty-three states; 6,400 in New York (the last of the Mohicans), 5,900 in Florida (some of whom can repeat the Semole's Deed), 10,000 in Wisconsin; 32,000 in the Dakotas and 120,000 in Oklahoma (some of them millionaires). The American Indian still holds the title to seventy-two million acres of land, a farm of over 200 acres for each Indian. And statistics say that the poor Indian is worth \$2,600 per capita.—Catholic Citizen.

The "Come Back" of The "T. D."

(From the Montreal Gazette.) Clay pipes are said to be coming in to fashion again. These "homely" pipes were smoked by all classes before 1859 and were considered "the things" till the arrival of briars. In Mallet's reminiscences of the late artist it occurs:—"Milo's" cutty pipes were quite the thing, and the selection by cadets of a good one out of a fresh consignment packed in sawdust was eagerly watched by the "Johns." These clay pipes are referred to in one of Surtee's novels as "the clay pipes of gentility." Milo used to charge 12 cents each for his clays, as the following burlesque published at that time would indicate:

"Think not of meerschaum is that bowl; away Ye good enthusiasts, it is common clay. By Milo stamped, perchance by Milo's hand. And for a tizzy purchased in the Strand."

**Stafford's Liniment**

An invaluable remedy for Rheumatism, Neuralgia, Headache, Bruiases, Sprains, Stiffness of the Joints, etc. DIRECTIONS.—Apply by the hand, rubbing it in well then cover with a piece of flannel. BE PREPARED and keep in the house a bottle of this reliable antidote. FOR SALE EVERYWHERE. Manufactured by DR. STAFFORD & SONS, Chemists and Druggists, St. John's, Nfld.

DON'T MISS THIS GREAT CLEARANCE SALE DISCONTINUED LINES BOOTS & SHOES!

We simply do not want to carry broken lines of shoes from season to season, and have priced many of these to less than a third of their original value. Our object in doing this is to reduce our stock to the lowest point possible, in order to make room for Fall Footwear.

You are now face to face with the greatest Shoe Buying Opportunity at KNOWLING'S**2.75 Women's White Buck Boot Bargain**
