ON THE STAGES AND FORMS OF SYPHILIS WITH
MORE ESPECIAL REFERENCE TO THE HEPATIC
MANIFESTATIONS OF THE DISEASE.¹

By J. G. ADAMI, M.A., M.D., F.R.S.E.,

Professor of Pathology, McGill University; Pathologist to the Royal Victoria Hospital,
Montreal.

IT is remarkable how during all these centuries syphilis has remained sharply distinguished from all other forms of human disease, constituting a class apart. There are many other contagious maladies, not a few chronic infectious disorders, and, now-a-days, we are able to group these together; we can recognize common principles governing their course and effects upon the organism and can see, or think we see, a common principle underlying
