

IN CATARRHAL . . .

. . . HYPERSECRETION

BLENNOSTASINE

**WILL GIVE PROMPT
RESULTS**

In Acute Coryza

One grain doses given every half-hour will speedily control the mucous discharge. In most cases the attack may be cured in from 12 to 14 hours.

In Laryngeal and Bronchial Colds

The congestion is diminished in a remarkably short time. The attacks may be completely aborted with Blennostasine. It is superior to Belladonna and is non-toxic.

In Chronic Nasal Catarrh

It is advisable to give larger doses—from three to five grains every six hours or until the physiological effects are obtained. No unpleasant symptoms are observed and the result is excellent, the congestion of the mucous membrane being at once relieved.

In Asthma and Paroxysmal Sneezing

The excessive mucous secretions are arrested and the sneezing ceases. Accumulations of mucous at night are prevented by a five grain dose administered at bedtime.

Blennostasine is the best given in pillular form; 1, 3 and 5 grain pills, Gelatine-Coated, are supplied.
