

# CRAIN

## One Book Instead of Three.

The old "rule of three" which doctors and dentists have laboriously followed for years has given place to the Crain "rule of one." Instead of a clumsy ledger, a bulky day book and a large historical record, the up-to-date professional man has now but one neat loose leaf ledger on his desk.

In the Crain Doctor's and Dentist's Ledger the front of each page is devoted to the family account, with a column which shows balance due, so that you will not have to foot up a lot of figures every time you render an account.

The back of the Doctor's sheet is ruled for a complete clinical history of the family or individual—on the Dentist's sheet are shown diagrams of the teeth.

Filled pages and inactive accounts are removed to the transfer binder, preventing ledger from becoming bulky.

The simplest, most accurate and greatest time-saver is the Crain System. Write for our folder, "*Pointers for Professional Men*," which explains it more fully.
