

4. Scientific Information, Research and Development

In order to improve understanding of their common problem and to increase their capability for controlling transboundary air pollution both Governments shall:

- (a) exchange information generated in research programs being undertaken in both countries on the atmospheric aspects of the transport of air pollutants and on their effects on aquatic and terrestrial ecosystems and on human health and property;
- (b) maintain and further develop a coordinated program for monitoring and evaluation of the impacts of transboundary air pollution, including the maintenance of a Canada/United States sampling network and exchange of data on current and projected emissions of major air pollutants; and
- (c) continue to exchange information on research to develop improved technologies for reducing emissions of major air pollutants of concern.
