Kasio, Jan. 31.-[Special.]-As foreshadowed in this correspondence some weeks since, a traffic arrangement has been entered into between the Nelson & Fort Sheppard Railway company, and solid body. A great deal of black oxide the International Navigation and Trad- of copper has come in, and on Tuesday ing company, by which the steamers copper glance was found. This is the of James Clark, superintendent. International and Alberta will connect richest form of copper and it is by no at Five Mile Point with the railway system, instead of the Kokanee and Nelson, which will tomorrow pass into the possession of the Canadian Pacific railway. It is understood that under the new arrangement, both the International and Alberta will be employed, the former will doubtless connect with their own initiation ceremonies. system, where great change and im- The A.O. U. W. will organize at Trail

Whether or not their presence was at Trail. due to the contemplated changes, was not given out, but Kaslo had a large delegation of prominent railway men in the city on Friday and Saturday, in Colonel Peyton Says the Money is Not which the three northern transportation lines were represented. From the general freight agent, St. Paul; S. G. The regular monthly meeting of the ore in the camp which can show such Northern Pacific there were S. L. Moore, general freight agent, St. Paul; S. G. The regular monthly meeting of the Le Roi company was freight agent, and E. A. Hackett, traveling freight agent; Portland. The Great freight agent; Port Hill, assistant general freight agent, and Mr. Jackson, traveling freight agent. There was any probability of the mine that he will soon be able to make it being sold to an English syndicate. freight agent, Portland. The Great division freight agent, represented the C. P. R. There was besides A. B. Jack. son, from the Burlington system. Railway talk was very much in evidence all day, and merchants had freight rates and quick dispatch talked to them until they were quite ready for a change.

There was some talk on the streets on Saturday to the effect that Frank C. Loring, of the Josie, had purchased the "Swedes group" of mineral claims on the south fork of Kasle creek, consisting lines, arrived last Tuesday. He reports Deputy Forgitrol, both prominent biof the Silver Bell, Hub, and a fractional claim. Inquiry at the original source failed, however, to confirm the report, although it seems there have been some negotiations between the parties. These are the same properties which have been two or three times previously reported as sold, but they still remain in the hands of the original locators. It is well understood, however, that \$60,000 has been more than once offered and refused for these prospects. The showings, with only a small quantity of development, are said to be somewhat remarkable. If Kaslo has been slightly behind during the last two or three years, in the conveniences of modern civilization, the charge will not lie against the little city any longer. Since the beginning of the year improvements have come in rapid succession. The sales of coal oil will be fewer in the future, and the usefulness

of the water cart is about gone. rapidly filled.

IRON MASK STRIKE The Ottawa and Ivanhoe Silver Mines.

LIMITED LIABILITY.

This company is the owner of the Ottawa and Ivanhoe mineral claims on Wellington Mountain in the famous Slocan District, and they adjoin the celebrated Wellington Mine, a regular producer of high grade ore, which is in an advanced stage of development. Smelter returns from 453 tons of ore from the Wellington show a net return of \$54,657.85 or \$120,65 per ton. Assays of Wellington ore run from 200 oz. to 2,000 oz. silver per ton. The development of the Wellington has practically demonstrated the value of the Ivanhoe, and indicates very plainly that its ore veins extend

into and run through the Ottawa and Ivanhoe. The location of the properties is particlarly favorable for the transportation of ore, they being about a mile from Wellington siding, on the

Kaslo & Slocan Railway and connected therewith by a good wagon road.

A sufficient amount of work has been done on the properties to entitle the company to a crown grant, which has been applied for.

The development consists of a tunnel on the Ivanhoe about 120 feet in length, tapping the Wellington vein at a depth of 40 feet, showing a width of vein between walls of 20 feet, in which were found carbonates, galena and mixed vein matter, assaying 40 oz. in silver and about 30 per cent. lead, while at a depth of 185 feet on the same vein in Wellington ground the ore runs about 200 oz. in silver and 30 per cent. lead, which is a good indication of what may be expected in the Ivanhoe. In addition to the tunnel there are several open cuts where the claim has been prospected to determine the course of ore bodies.

It is not claimed by this company that they are offering developed and paying mines. If they were it would be impossible to purchase shares at anything like the low price at which the first issue of shares will be placed on sale, but it is claimed that they are excellent prospects in a good locality, which have every indication of developing into first-class and paying mines.

The standing of the men who are at the head of the company is such that investors are assured that all money paid for treasury shares will be honestly and judiciously expended for the development of the property, and none of the promoters' shares will be offered for sale as they are content to take their chances on the result of development.

The Officers of the Company are:

SANFORD H. FLEMING, Esq., C. E., of Ottawa, President. J. FRED RITCHIE, P. L. S. Esq., of Rossland, Vice-President. P. G. NASH, Esq., of Rossland, Secretary Treasurer.

DIRECTORS .- SANFORD H. FLEMING, Esq., C. E.; GEO. P. BROPHY, Esq., C. E., of Ottawa; J. FRED RITCHIE, Esq.; J. K. CLARK, Esq.; P. G. Nash, Esq., Rossland.

Among the promoters and principal stockholders are Wm. McNally, Esq., Montreal; Harold Kennedy, Esq., Quebec; A. Allan, Esq., Ottawa and J. W. McRae, Esq., Ottawa.

The capital stock of the company is 1,000,000 shares, par value \$1.00 each, 400,000 shares set aside for development purposes. The shares are fully paid and non-assessable. The company is incorporated under the laws of British Columbia and the head office is at Rossland, B. C. 50,000 of the treasury shares are now offered at 121/2c. each. No certificates will be issued for less than 200 shares. Send for prospectus.

THE CUBAN SITUATION.

call-Tariff Concession to America. London, Feb. 2.-A dispatch to the government has listened to the representations of the Marquis de Apeztezuia, who has arrived here on behalf of the constitutional party of Cuba, with the approval of his political associates. His conferences with the Spanish ministers ing abuses underlying the Cuban dis-

It is expected that General Aszcarraga, the Spanish minister of war, will be appointed a viceroy to Cuba, and that he will in reality succeed Captain General Weyler. It is now probable that the future government of the island will be placed in the hands of a mixed commission under the immediate presidency of the viceroy. Spanish intervention in the appointment of high officials, it is

thought, will be greatly curtailed. The matter of the tariff demands of the American government, it is now understood, is really the chief difficulty in the way. Spanish officials find it difficult to understand why the United States should be favored as desired by the American government, especially if

Directors: C. M. Carpenter, Robt. Dixon, J. E. Crane, J. B. Henderson. Solicitors: Elliott & Whiteside. Bankers: Bank of Montreal. Harry Gager, Mining Engineer.

The Old Flag Gold Mining company is the owner of the Eureka group of mineral claims, consist ing of the Eureka No. 1, Triumvir, Esmeralda, Old Flag and Omenica, situate on the south slope of Lookout mountain, in the celebrated Trail Creek mining division of West Kootenay district. Good surface showings have been found on each, assaying from a trace to \$5.60 in gold, \$3.93 in silver and from 14 to 17 per cent (\$28 to \$34) in copper.

This property was purchased on the report of Mr. Harry Gager, mining engineer, on the Eureka No. 1. The following is his report in full:

Report on the Eureka No. 1 Mineral Glaim.

Location.—This property consisting of one full claim, fifteen hundred by fifteen hundred feet (1500-x 1500), is situated on the east slope of Lookout mountain about seven (7) miles below and south of Trail, B. C., and one (1) title west of the Columbia river, at Poulton's landing near old Fort Sheport and from two (2) to two and one-half (2½) miles north of the International boundary line, Trail pard and from two (2) to two and one-half (2½) miles north of the International boundary line, Trail division, West Kootenay district, British Columbia.

FORMATION.—The general formation consists of granite, diorite and syenite, with dykes of porphyry running parallel with the granite, the trend being almost due north and south. VEIN OR LEDGE.—The vein or ledge is of the same character as those found near Rossland, known as the Marquis de Apeztezuia affirms, the insurrection can be crushed in two months.

Spain, it is asserted, will probably realize that the friendly intervention of the American government may be too dearly purchased and at the sacrifice, not only of important Spanish interests, but the equitable claims of other European nations.

Vein or Ledge.—The vein or ledge is of the same character as those found near Rossland, known are into read and in two may be given as in the sacrifice of the discovery and is on the surface. At the discovery there is a small outcrop near the hanging wall which is well meralized, but in bunches. This however, is a good indication of what may be expected upon development, as samples of this have given assay values of \$2.50 to \$5.50 gold and from 14 per cent. to 17 per cent. copper and also some given assay values of \$3.50 to \$5.50 gold and from 14 per cent. to 17 per cent. copper and is very strong, silver. The principal outcrop is about eighty (80) feet north of the discovery, and is very strong, silver. The principal outcrop is about eighty (80) feet north of the discovery, and is very showing it to be fully fifteen (15) feet in width, and it shows for fully thirty (30) feet in length, being showing it to be fully fifteen (15) feet in width, and it shows for fully thirty (30) feet in length, being showing it to be fully fifteen (15) feet in width, and it shows for fully thirty (30) feet in length, being showing it to be fully fifteen (15) feet in width, and it shows for fully thirty (30) feet in length, being showing it to be fully fifteen (15) feet in width, and it shows for fully thirty (30) feet in length, being showing it to be fully fifteen (15) feet in width, and it shows for fully thirty (30) feet in length, being showing it to be fully fifteen (15) feet in width, and it shows for fully thirty (30) feet in length, being showing it to be fully fifteen (15) feet in width, and it shows for fully thirty (30) feet in length, being showing it to be fully fifteen (15) feet in width,

shows to be in a contact between granite and perphyritic granite.

In my opinion, the ledge here is broken over, and the dip, which is now at an angle of about forty (40) degrees to the west, will change when development work is done to an angle of perhaps from sixty (60) to seventy (70) degrees. The general dip of the formation would indicate this. Workings.—The only work done on this property at the present time is a small open cut at place of discovery, and a cut made at the principal outcrop as assessment work. This cut was made through the foot wall and into the ledge for a short distance.

GENERAL REMARKS.—This is in my opinion a most promising prospect, and upon development it will prove a very valuable property.

The surface showings of many of the principal mines in the district and in the vicinity of Ross-land were not as good as this, and like them it will require development to demonstrate its value.

A wagon road can be made almost to the property at a small cost, and by that the ore could be transported to the smelter at Trail, or Northport, Washington, by steamboat, or ferried across the transported to the smelter at Trail, or Northport, Washington, by steamboat, or ferried across the Columbia river and loaded on cars at Waneta, B. C., and from there taken to the smelter at Nelson, Columbia river and loaded on cars at Waneta, B. C., and Spokane Falls & Northern railway.

B. C. or to the states via the Nelson & Fort Sheppard and Spokane Falls & Northern railway.

Passectfully submitted.
