## THE MINING REVIEW

The Evening Star Was the Only Shipper Last Week.

### THE PLANT OF THE CALIFORNIA

It is to be Started Up in a Few Days and then a Good Sized Force is to be Employedthe Larger Veins.

South African war, the change of provingial government, and complications arising out of the labor law, those who know best appear to be confident with regard to the output of the mines in the future. The hest sign of this is that real estate is keeping its values, with what is decidedly an upward tendency observable. For instance, the Rossland Real Estate & Investment company, limited, of which Hon. C. H. appear to be confident with regard to the terly dividend at the rate of 20 per cent dividend on a very large capital, and the blacksmith shop at the mouth of largely interested, is now paying dividends at the rate of 28 per cent per annum. from the returns made by several of the English companies, there is every reason to anticipate several good dividend-paying properties during the present year. This poses of the question as to whether or not there is a field for capital in British

The Output For the Week.

only two carloads sent to Northport and iron. There is considerable calcite sinking in this mine, no shipping ore is being encountered. It seems probable that on the east side of Sophie mountain, he this will be the lowest week on record.

so during the week as a test of its being in perfect order. No fault was 10 bc found, and the management is contented with the results. The covering of the wooden box or flume conveying the pipes has yet to be provided, but this can be done at any time. A test of the new un- ping grade. derwriter pump was made yesterday afternoon in presence of some of the officials of the War Eagle company, Chief Guthrie of the municipality, and some of the city folk. The pump, which can be worked could be applied, it is apparent that all competent to deal with the inrush. four streams, if necessary, could be used Bunker Hill.—The 10-stamp m s 85,000 gallons. The stream of water that can be thrown against a burning building, can be directed with so much force as to actually break the planking. inch mains, on the present three-inch added. pipes being removed. The fire brigade number twelve, and are under the control of the fire chief. Mr. Angus McLeod. As all are resident upon the ground, their

services can be obtained at any time. The orce is a voluntary one. Centre Star .- The surface of the mine resembles a particularly busy ant-heap. In one direction are to be seen a body men mixing grout for the foundations

dations, and can be expected to be able to resist any conceivable strain in this direction. Behind the hoist another party of men are finishing the excavations for the hoisting engine. A small hoist is in position, but new machinery is to be installed as soon as the ground is ready for its reception. Over this passes the rocdway, the chasm being crossed by a massive bridge hung from two 12-inch feet below the level of the readway. Such sample of the way method is carried into Progress of the Surface Improvements on the workings of this mine, mention may be made of a device for painting. On man was employed in giving a coat of black paint to the corrugated iron roof Notwithstanding the temporary depres- of the big boiler house. Ordinarily speakgon caused by large reduction of work in ing, a regular gang would have to be emthe Centre Star and War Eagle, the ployed to finish the undertaking within any reasonable lapse of time. The employment of a paint spray, worked with the ly divided jet, enables the work to be accomplished not only expeditiously, but with great economy of both material and labor.

Le Roi.-The only work which is goin on under ground just now is the borin with the diamond drill which has prove quite a success in the kind of rock which it encounters. By means of this drill per annum. The Governor appears to rapid and accurate estimate of the externor have been singularly discreet in the flota- and value of the various ore bodies pres tions he has been connected with. The ent can be gained. On the surface th Le Roi has already declared a 10 per cent finishing touches are being made to the British America corporation, on a capital of \$7,500,000, recently declared a dividend ing undertaken for the extension of the of 10 per cent. The Sumpter Townsite timber framing shop lately erected. The company, in which Mr. Mackintosh is ground is also being prepared for the Black Bear flat is blocked with supplies of timber which are to be used in the erec tion of various works on this mine, and on the adjacent properties of the West

Arthur.-The tunnel is now in for a distance of 58 feet, and for the past six feet a stringer has been followed which on the surface. For the third week in succession the out- has now widened out to 10 inches. The put has been merely nominal, there being stringer carries quartz and decomposed those from the Eevning Star. This is ow- ing in, which is thought to indicate that ing to the work in the Iron Mask being the main ledge is not far away. This is rely development, and thus because of the report which was brought in by Mr. the nature of the present driving and Hugh Hastings, engineer in charge of the says, is in wretched condition, as the snow is slushy. On the west side of the mountain most of the snow has melted and the trail is in fairly good condition. Another couple of weeks of warm weather, he says, will put the trail on both sides of the mountain in good con-

California.-Mr. Jay P. Graves, the managing director of the California, was in the city during the week, and inspected the California's new ten drill compressor plant, which is in position. The mo-War Eagle.—The steam pipe line from tor which is to furnish the power for the the boilers at the Centre Star has been compressor, will be in place in a day or completed, and connection has been made two, and early during the coming week with the new hoist at the upper level. Grand Forks, B. C., March 23.-(Spe Sunset No. 2.-Some fine-looking shiping ore is being hoisted from No. 3 cial.)—In a recent trip up the north feek shaft. It comes from No. 3 vein at a of Kettle river your correspondent was point 300 feet southwest of the shaft. For greatly impressed with the magnificent the last 13 feet the ledge, which was broken up before, has become solid and outlook for the properties of the Earth the property never looked better than quake Consolidated Gold Mining comt does at present. There are 26 men at ing in Brown's camp as a result of the development work carried out during the post 11 months. The group includes the ning into the shaft and interfering con-siderably with the work. The pumps have all that they can do to keep the Earthquake, Phil Sheridan and Last Chance locations, lying on the southern slope of Volcanic mountain and extendbeen able to do so. On the 350-foot level on the tunnel and shaft as soon as the machinery gets in working order. It is now anticipated that the increased force will be put to work on the first of April.

Mascot.—The winze is now down to a depth of 100 feet, and the ore body has widened out to 2 1-2 feet of one of a chin. I. X. L.—Drifting on the lower level These two claims have the greatest surcontinues. The drift to the east on this level being now 75 feet long. Stoping conlevel being now 75 feet long. Stoping con-tinues on the No. 1 level. There have been no developments of importance lately.

Josie — The many importance length. The Earthquake group contains either with compressed air or steam, was tried with the latter. Sixty pounds of pressure from the compressor gave a pressure of 16 pounds at the nozzle at the end of one length of hose. At this point the men could barely hold the tube steady although two were struggling with it. A stream fully 150 feet in height mounted has now been driven in for a distance of about 110 feet.

Jumbo.—Drifting along the big ledge on the 450-foot level continues. The showing of ore continues to be large.

Large trunkes, being connice to the tunner, which has now been driven in for a distance of the diorite at or near its contact with the dykes referred to. The values appear to be chiefly gold, but much of the vein matter carries considerable copper. The Earthquake claims were located in 1300 by W. K. White, a well-known prospec matter carries considerable copper. The Earthquake claims were located in 1366 by W. K. White, a well-known prospector, who, working alone, did sufficient to indicate the size and continuity of several O. K.-Work continues in No. 12 tunindicate the size and continuity of several ledges. Systematic development was not inaugurated until leat spring, when the claims were acquired by Frank Sears of Grand Forks. Mr. Sears organized a company with a capital of \$150,000, divided into 1,500,000 shares of the par value of ten cents. The treasury stock was largely subscribed for in this city. The officers are: President, Charles A. Powell; secretary, Frank Sears J. W. MacLaughlin, treasurer, local manager of the Eastern Township's Bank. The principal eastern shareholders are Wm. Farwell, general manager of the same bank, in P. M. Allen was brought up on an ad-

## It is expected that it will break through during the present week. These are the only two places where work is being un. GRAND TORKS INTELLIGENCE Oriel Mining and Milling Co., Limited

Owning the Good Hope Group, Ymir, B. C.

Fifty thousand treasury shares are now offered to the public at 10 cents. The property is one of exceptional merit, having a clearly defined vein traceable for 2,000 feet. Samples taken from various points on the outcrop from the main workings at a depth of 70 feet, give excellent values averaging \$26 in gold. The ore is of a class that can be readily treated on the ground by milling Among other well-known properties in the Ymir district are the Ymir, Tamarac, Dundee, Blackcock,, Willcock, etc.
