

Therapeutic Notes.

LISTERINE DERMATIC SOAP.—The Lambert Pharmacal Co. has lately inaugurated a new venture in the way of an antiseptic soap which possesses the virtues of Listerine in so far as a soap may. It is only a matter of recent years that especial attention has been given to producing soaps which shall possess a degree of curative power in disease of the skin and in the care of surgical conditions. A considerable variety of such soaps is now on the market, and the mission of the lot is wide; it is safe to say that Listerine Dermatic Soap will prove one of the most serviceable, and will soon make for itself a popularity with the profession in keeping with that which has been established by Listerine.—*Medical Fortnightly, Jan. 25, 1905.*

SOME FACTS ABOUT SANMETTO.—Sanmetto is a combination of the virtues of santal and saw palmetto in a pleasant menstrum of aromatics. In your practice you will find many diseases and diseased conditions in which Sanmetto will be indicated. I will name some of these diseases, and you have only to prescribe this remedy. Be careful as to diet and exercise as you would in prescribing any other remedy, and you will soon find it the best friend you ever had,—Cystitis, both acute and chronic; enlarged prostate with its usual irritation of neck of bladder and sensitive urethra; urethritis, both specific and non-specific; impotence, either due to excess or premature decay; and simple irritation of any part of the genito-urinary tract. It is also a great aid in treating many diseases of the pelvic organs in the female. Also seminal emissions and prostatorrhea, hæmaturia and enuresis are well treated with this remedy, except where surgical interference is necessary.

ANTI-KAMNIA, (Therapeutic Indications).—Antikamnia is an American product, and conspicuous on this account and because of the immense popularity which it has achieved, it is to-day in greater use than any other of the synthetically produced antipyretics. The literature is voluminous, and clinical reports from prominent medical men in all parts of this country, with society proceedings and editorial references, attest its value in actual practice in an endless variety of diseases and symptomatic affections, such as the neuralgias, rheumatism, typhoid and other fevers, headaches, influenza and particularly in the pains due to irregularities of menstruation. Antikamnia has received more adverse criticism of a certain spiteful kind, particularly directed against its origin—and because of its success—than any other remedy known; critics have seemed personally aggrieved because of its American source, and that it did not emanate from the usual "color works," but their diatribes have fallen flat as do most persecutions and unreasonable and petty prejudices. The fact stands incontrovertible that antikamnia has proved an excellent and reliable remedy, and when a physician is satisfied with the effects achieved he usually holds fast to the product. That is the secret and mainspring of the antikamnia success. It is antipyretic, analgesic, and anodyne, and the dose is from 5 to 10 grains,
