

Halley's Comet
*brightens the skies once
in seventy-five years*

But Every Day
*the earth is
brightened
by*

SAPOLIO

Works Without Waste

Halley's comet, with its millions of miles of tail, is sweeping into view in the evening sky on its seventy-five-year trip. Already astronomers have announced its appearance on time, and in April it will be visible to the naked eye. In May it approaches within a few million miles of the earth. It is named after Edmund Halley (1656-1742), who determined its orbit, a new and remarkable accomplishment for that time, risking his reputation with posterity by prophesying its return in seventy-five years.
