Mississauga, ON
L4W 1E4

Phone: 416-625-7222
Fax: 416-625-3790

Export Contact: Mr. William J. Keane, President

Marketing Profile

H.R. Runciman Co. has been established for over twenty years manufacturing VENTAIR, which is a suction hose system for exhausting fumes from cars and trucks while the engine is running during service, and is available for in ground installation or above ground, both methods having a hose retracting feature.

The product has been used extensively for over twenty years in vocational school auto shops, new car and truck dealerships and Canadian Forces service garages to exhaust carbon monoxide and diesel fumes.

Health hazardous products and energy saving being so important today the concept of exhausting carbon monoxide fumes from the workplace right at the source (the engine exhaust) by means of a hose and piping connected to an exhaust fan, has become a necessary requirement not only in new garages but in older existing buildings too.

Ventair has a variety of exhaust units that can be set in a floor, hung from overhead or mounted on the wall at the repair bay. The system concept is very simple and practical.

Products/Services Available for Export:

Garage Ventilation Equipment
