

27. The first of these is the fact that the
 system is not a simple one. It is a
 complex one, involving many different
 parts and processes. This complexity
 makes it difficult to understand and
 manage. The second is the fact that
 the system is not a static one. It is
 a dynamic one, constantly changing
 and evolving. This makes it difficult
 to predict and control. The third is
 the fact that the system is not a
 closed one. It is an open one, with
 many external influences. This makes
 it difficult to isolate and study.

28. The first of these is the fact that
