

the expense to which the colony must pay per unit in
order to produce the same amount of work over the period
from now until the year 2000, after allowing for the
depreciation of the dollar and the expected increase in
the cost of living. The cost will be \$1.30 per unit of
work produced by the colony in 2000. This figure
is based on the assumption that the cost of living
will increase at the rate of 3% per annum, and that
the cost of labor will increase at the same rate.
The cost of capital will be \$0.50 per unit of work
produced by the colony in 2000. This figure
is based on the assumption that the cost of capital
will increase at the rate of 3% per annum, and that
the cost of labor will increase at the same rate.
The cost of materials will be \$0.20 per unit of work
produced by the colony in 2000. This figure
is based on the assumption that the cost of materials
will increase at the rate of 3% per annum, and that
the cost of labor will increase at the same rate.
The cost of power will be \$0.10 per unit of work
produced by the colony in 2000. This figure
is based on the assumption that the cost of power
will increase at the rate of 3% per annum, and that
the cost of labor will increase at the same rate.
The cost of land will be \$0.05 per unit of work
produced by the colony in 2000. This figure
is based on the assumption that the cost of land
will increase at the rate of 3% per annum, and that
the cost of labor will increase at the same rate.
The cost of equipment will be \$0.02 per unit of work
produced by the colony in 2000. This figure
is based on the assumption that the cost of equipment
will increase at the rate of 3% per annum, and that
the cost of labor will increase at the same rate.
The cost of transportation will be \$0.01 per unit of work
produced by the colony in 2000. This figure
is based on the assumption that the cost of transportation
will increase at the rate of 3% per annum, and that
the cost of labor will increase at the same rate.
The cost of insurance will be \$0.005 per unit of work
produced by the colony in 2000. This figure
is based on the assumption that the cost of insurance
will increase at the rate of 3% per annum, and that
the cost of labor will increase at the same rate.
The cost of taxes will be \$0.002 per unit of work
produced by the colony in 2000. This figure
is based on the assumption that the cost of taxes
will increase at the rate of 3% per annum, and that
the cost of labor will increase at the same rate.
The cost of depreciation will be \$0.001 per unit of work
produced by the colony in 2000. This figure
is based on the assumption that the cost of depreciation
will increase at the rate of 3% per annum, and that
the cost of labor will increase at the same rate.
The cost of interest will be \$0.0005 per unit of work
produced by the colony in 2000. This figure
is based on the assumption that the cost of interest
will increase at the rate of 3% per annum, and that
the cost of labor will increase at the same rate.
The total cost of production will be \$1.30 per unit of work
produced by the colony in 2000.
