

PROF. FRANCIS W. NEWMAN, of Oxford University, says:—"Nothing is clearer to anyone who will open his eyes than that what is now called Vaccination has no effect in lessening small-pox, and has frequent and terrible effect in doing mischief."

DR. NIEMEYER, of Tubingen, in his Text Book of Medicine, 1879, says:—"It cannot be denied that vaccination endangers life, and in many cases leaves permanent impairment of health, especially cutaneous diseases and other scrofulous affections, due to the debilitating influence of the fever accompanying the vaccinia."

DR. JOSEF HERMANN, Chief of the Imperial Wiede Hospital, Vienna, from 1858 to 1864, (*from the Naturarzt.*) says:—"When a man has treated hundreds of cases of small-pox, both under sporadic and epidemic conditions, through many years and at all seasons, he comes to the decided conclusion that vaccination has not the remotest effect on the outbreak, course, or issue of the disease. Vaccinated persons, bearing unmistakable marks of the process on their arms, frequently have confluent small-pox."

SIR THOMAS CHAMBERS, M.P., RECORDER of London. Eng., says: "I have received most touching letters from all quarters, complaining of the grievous sorrow and suffering inflicted on families through the Vaccination Acts."

SIR THOMAS WATSON, M.D., of London, Eng., says:—"I can sympathize with, and even applaud, a father who, with the presumed dread in his mind, is willing to submit to judicial penalties rather than expose his child to the risk of an infection so ghastly as Vaccination."

HON. THOMAS BRETT, M.D., of London, Eng., says: "After many years' experience, I arrived at the conclusion that Vaccination was not only useless as a preventive, but dangerous. I decline the risk of Vaccination, and would not vaccinate my bitterest enemy."—*Speech*, April 17th, 1883.

DR. A. H. CARON, Paris, Chevalier of the Legion of Honor, and Member of many learned Societies, says:—"For my own part, it is long since I have positively refused to vaccinate at any price. Vaccination is a bauble, gilded over indeed by Act of Parliament, but a bauble still, with which doctors rock—too often to a fatal sleep—the gullible children of the world."—*Letter to Dr. CAPLIN*, Portman Square, London.

SIR HENRY HOLLAND, Bart., M.D., F.R.S., says:—"It is no longer expedient, in any sense, to argue for the present practice of Vaccination as a certain or permanent preventive of small-pox. The truth must be told, as it is, that the earliest anticipations on this point have not been realized. Whether small-pox may ever be wholly eradicated is a very doubtful question, and the probability is on the negative side?"—*Medical Notes and Reflections*; London; pp. 401, 415, and 416.

DR. B. F. CORNELL, M.D., President of the Homeopathic Medical Society of New York, says:—"It is my firm conviction that Vaccination has been a curse instead of a blessing to the race. Every physician knows that cutaneous diseases have increased in frequency, severity, and variety, to an alarming extent. To what is this increase owing? Contagion may account for some of the varieties; in a large majority, however, to no medium of transmission is the widespread dissemination of this class of diseases so largely indebted as to Vaccination."—*Address delivered before the Homeopathic Medical Society of New York*, February 11th, 1868.

LONDON "STANDARD." February 24th, 1883:—"It is well known that the small-pox patients in the hospitals of the Metropolitan Asylums Board, are three-fourths of those persons who had been successfully vaccinated in infancy; and amongst such vaccinated persons there occur some of the worst cases of small-pox, in which the eruption is confluent."
