

## No. 9.—Continued.

*Cranioscopy.*

Teeth, none present. Alveolar borders smooth.  
 Temporal line, reaches to within 4.4 centimetres  
 of median line at bregma. Temporal fossæ  
 thus very large.....  
 All foramina are surrounded by a rounded  
 ring of thickened bone....

*Craniometry.*

Millimetres.

|                                                              |    |                    |
|--------------------------------------------------------------|----|--------------------|
| Age, 70.....                                                 | 1  | 199                |
| Sex, male.....                                               | 2  | 130                |
| Sutures, simple. In some places obliterated....              | 3  | 134                |
| Inion, O.....                                                | 4  | 91*                |
| Pterion, H.....                                              | 5  | 85*                |
| Artificially lengthened occipital foramen comes<br>to I..... | 6  | 106                |
| Lateral parietes, flattened, perpendicular.....              | 7  | 8                  |
| Temporal ridge, from metopic point to this line              | 8  | 112                |
| 45 mm., bregma to stephanion, 47 mm....                      | 9  | 130                |
| Glabella, prominent.....                                     | 10 | 45                 |
| Superciliary ridges, prominent and rough....                 | 11 | 67                 |
| Frontal eminences, slight.....                               | 12 | 278                |
| Forehead, retreating.....                                    | 13 | 239                |
| Proboscis, bulging.....                                      | 14 | 270                |
| Sub-nasal curve, flattened.....                              | 15 | 507                |
| Mastoid processes, thick, rough, medium length               | 16 | 71                 |
| Median line, raised from glabella to obelion..               | 17 | Both zygomas gone. |
| Vault, keel-shaped.....                                      | 18 | 53                 |
| Hollow at root of nose, deep.....                            | 19 | 28                 |
| Inferior border of nares, shallow.....                       | 20 | 65,3               |
|                                                              | 21 | 70                 |
|                                                              | 22 | 107                |
|                                                              | 23 | 67.3               |

\*In this case the high curve of the temporal lines makes the so-called maximum frontal diameter appear less than the minimum.
