

TIME GUINEA FOWLS SIT.—(*Subscriber, Quebec.*)—The hatching occupies from twenty-eight to thirty days. See Incubation Table on page 19, vol. 1.

CANARY BECOMING BLIND.—(*Bird Fancier.*)—Blindness will be no drawback to the bird as a songster; the probability is that it will sing more strongly than before. We sometimes hear of the barbarous practice of depriving a bird of sight by searing the eye with a hot iron, which is supposed by some to have the effect of making it a more finished songster. We know of nothing which will cure it. It will have no difficulty in finding its seed and water.
