

VESTIGES OF THE CREATION.

Vestiges of the Natural History of Creation. By Sir Richard Vyvyan, Bart., M. P., F. R. S., &c. One vol. 12mo. well printed. Price 75 cents.

CONTENTS.—1. The bodies of space, their arrangements and formation—2. Constituent materials of the earth and other bodies of space—3. The earth formed; era of the primary rocks—4. Commencement of organic life; sea plants, corals, &c.—5. Era of the old red sand-stone; terrestrial zoology commences with reptiles; first traces of birds—5. Era of the oolite; commencement of mammalia—6. Era of the cretaceous formations—7. Era of the tertiary formation; mammalia abundant—8. Era of the superficial formations; commencement of the present species—9. General considerations respecting the origin of the animated tribes—10. Particular considerations respecting the origin of the animated tribes—11. Hypothesis of the development of the vegetable and animal kingdom—12. Maclay system of animated nature; this system considered in connexion with the progress of organic creation, and as indicating the natural status of man—13. Early history of mankind—14. Mental constitution of animals—15. Purpose and general condition of the animated creation—16. Note conclusory.

"This is a remarkable volume—small in compass—but embracing a wide range of inquiry, from worlds beyond the visible starry firmament, to the minutest structures of man and animals. The work is written with peculiar and classical terseness, reminding us very much of the style of Celsus. . . . We have dedicated a large space to this remarkable work, that may induce many of our readers to peruse the original. The author is, decidedly, a man of great information and reflection."—*Medico-Chirurgical Review*.

"This is a very beautiful and a very interesting book. Its theme is one of the grandest that can occupy human thought—no less than the creation of the universe. It is full of interest and grandeur, and must claim our readers' special notice, as possessing, in an eminent degree, matter for their contemplation, which cannot fail at once to elevate, to gratify, and to enrich their minds."—*Forbes' Review*.

"A neat little volume of much interest. Judging from a brief glance at the contents of the volume, the author has produced a work of great interest, and one which, while it affords the reader useful instruction, cannot fail to turn his mind to a very profitable channel of reflection."—*Commer. Adv.*

"A small but remarkable work. It is a bold attempt to connect the natural sciences into a history of creation. It contains much to interest and instruct, and the book is ingenious, logical, and learned."—*Newark Adv.*

"This work discovers great ingenuity and great research into the mysteries of nature. It is a noble work, and one which no intelligent person can read without finding a fresh impulse communicated to his thoughts, and gaining some higher impressions of the Creator's power, wisdom, and goodness."—*Albany Argus*.

"A novel and remarkable work, which will speedily attract the attention of all inquisitive readers. There is much that is new and ingenious in the book. The author, whoever he is, is a man of varied philosophical and literary attainments, and master of a style in conveying his thoughts, so pure, simple, and modest, that his treatise will be everywhere widely read."—*N. Y. Morning News*.
