

GLOVES.

With this suit a pair of gloves can be slipped on when wanted. In some regions there are on the market thin gloves of sheepskin that have a glossy surface which is a safe protection from stings. When these are not available, one must buy what

is on the market, preference being given to a pair with glossy surface, but, of course, any glove may be made sting-proof by coating with paraffin-wax or the least possible quantity of linseed-oil.

BEE-VEIL.

Most bee-keepers use the ordinary veil, extending from the hat to the shoulders. This style can be bought in any store that carries bee supplies. It is very tender,
