

THE LINN LOGGING TRACTOR

Designed and Developed for Winter Hauling, in the North Woods

Linn Tractor Hauling 62½ Cords of Mixed Spruce and Hemlock

The best Hardwood is each year becoming further distant from mill or railroad and is consequently greatly increasing in cost. In many cases very valuable wood cannot be touched, because horses cannot haul it the necessary distance.

To fulfill all requirements of the Northern Logger a tractor must:—

Haul heavy trains of sleighs **down steep sandhills** and around sharp curves. Haul with **absolute safety** over **lakes and rivers**, where the ice is sometimes not thicker than fourteen inches. ¶Haul heavy trains over main hauls—over all encountered grades—to landings. ¶Have carrying capacity **on itself**, so that it can be used for supply haulage over Portage roads. ¶Must be foolproof and easily operated and controlled.

All these requirements
are fulfilled only by

The Linn Logging Tractor
