**B**E careful when you put in a furnace that you don't have to pay for it twice over. By burning up more coal to produce the same amount of heat as the SUNSHINE Furnace, an ordinary furnace will cost

you many dollars in fuel bills each year, over and above what is necessary. In a very few years this amount will exceed the first cost of the furnace. People who own a

# McClary's Sunshine Furnace

get a clear fire always---more heat from an equal amount of coal. Why is this? For one thing, we make the firepot with straight sides, so that ashes can't cling and deaden the fire. Once coal is thoroughly burned out it is no longer of any use in the firepot, and should be removed in the form of ashes.

The least "rocking" of the shaker handle on the SUNSHINE Furnace causes the dead

ashes to fall, leaving a clear, bright, hot fire. Let the McClary dealer in your nearest town prove to you why the SUNSHINE Furnace is the best value for the money, the greatest heat-producer, the most durable and most convenient made.

There's money - saving information in our SUNSHINE Booklet---a postal addressed to our nearest branch brings you a copy by return mail.
