

various parts, and he died a month after the injury. His bed-room was a fair-sized one, well ventilated, and in a house in a good street, on the north side of, and not far from, Hyde-park.

A little boy, aged 6, met with a slight accident to his foot, which was followed by acute periostitis of the bones of the tarsus; this ended in suppuration; some of the joints were destroyed; and at different periods, several abscesses formed in various parts—over the greater trochanter, over the crest of the ilium, and in the sacro-lumbar region, as well as over the bones of the skull in divers places. The suffering was intense, with low muttering delirium and rapid wasting, and to such an extent, that the child was soon reduced to a mere skeleton. Thus matters went on for some weeks, after which the abscesses dried up; ankylosis of the bones of the tarsus took place, and when last seen, about a couple of years after the attack, he was a strong, active lad. All this occurred seven miles out of town, in a good house in a healthy part of the country.

I was summoned a long way into the country to a young lady laboring under symptoms of a typhoid character, the origin of which was obscure. It appeared, however, that she had recently had measles, which had been followed by a slight discharge from the left ear. The recovery from the measles had been good, and she was going about, when rigors and sweating occurred, and were followed by a fever, a dry, brown tongue, and great prostration; and such were the more obvious symptoms when I first saw this young lady. On further inquiry, it was now found, that the discharge from the ear had stopped; the intellect was quite clear; there was no pain in the head, no swelling in the neighborhood of the ear, but there was pain upon pressure immediately below the mastoid process, and this tenderness existed also some way down the side of the neck, in the course of the internal jugular vein. From this it was inferred that inflammation had spread from the ear to the lateral sinus and internal jugular vein, and that, in all
