

Contents

Introduction	2
The Health Field: Beginning to Realize the Potential	4
Monoclonal antibodies: Diagnostic and therapeutic tools	4
A new generation of vaccines	5
Protein engineering and peptide synthesis: The last word	6
Photoactive therapy in the fight against disease, especially cancer	7
A New Era for the Agri-Food Industry	8
Fermentation: New uses for an ancient craft	8
Dairy products: Winners in the biotechnology stakes	9
Can other food products be far behind?	10
Biotechnology in the Field . . . and on the Farm	11
Micropropagation: A second green revolution	11
High-performance biological fertilizers	11
Genetic improvement of plants: Already a reality	12
Breeding success in livestock	13
Developing Aquaculture	15
Protecting the Environment	16
Use of micro-organisms to purify waste water	16
Heavy metals and toxic products: Bacteria that can control them	17
Maximizing the Biomass	19
Encouraging Forest Growth	20
Improvements in Wood Processing	21
Mining with Bacteria	22
Glossary	23
List of Companies and Institutions Mentioned in This Publication	25

The purpose of this series is to inform readers of current trends in Canadian science and technology.

Published by Authority of the Right Honourable Joe Clark, Secretary of State for External Affairs, Government of Canada, 1990.
